Elective Courses

Program Name	Track	Elective - I	Elective - II
B.Tech in CSE	Network & Security	Blockchain, Cryptocurrency & NFT (PECCS602A)	Digital Forensics (PECCS603A)
	Artificial Intelligence & Data Science	Soft Computing (PECCS602B)	Natural Language Processing Data (PECCS603B)
	Theory & Systems	Graph Theory (PECCS602C)	Distributed Systems (PECCS603C)
	Applications	Image Processing (PECCS602D)	Computer Graphics (PECCS603D)
B.Tech in IT	Network & Security	Information Theory & Coding (PECCS602E)	Data Communication (PECCS603F)
	Artificial Intelligence	Soft Computing (PECCS602B)	Natural Language Processing (PECCS603B)
	Theory and Algorithms	Graph Theory (PECCS602C)	Computer Graphics (PECCS603D)
	Applications	Image Processing (PECCS602D)	E-Commerce (PECCS603I)
B.Tech in CSE (IOTCSBT)	Network & Security	Blockchain, Cryptocurrency & NFT (PECCS602A)	Digital Forensics (PECCS603A)
	Artificial Intelligence	-	Big Data Analytics (PECCS603G)
	Applications	-	Wireless Sensor Network (PECCS603H)
B.Tech in CSE (IOT)	Network & Security	5G Network Technology (PECCS602H)	Data Communication (PECCS603F)
	Artificial Intelligence	Soft Computing (PECCS602B)	Big Data Analytics (PECCS603G)
	Applications	Embedded System (PECCS602J)	Wireless Sensor Network (PECCS603H)
B.Tech in CSE (AI)	Artificial Intelligence	Soft Computing (PECCS602B)	Natural Language Processing Data (PECCS603B)
	Data Science	Data Science using Python (PECCS602K)	Cognitive Computing (PECCS603E)
B.Tech in CST / CSIT	Network & Security	Blockchain, Cryptocurrency & NFT (PECCS602A)	Digital Forensics (PECCS603A)
	Artificial Intelligence	Soft Computing (PECCS602B)	Natural Language Processing (PECCS603B)
	Applications	-	Computer Graphics (PECCS603D)
B.Tech in CSE (AI & ML)	Theoretical AI	Soft Computing (PECCS602B)	Natural Language Processing (PECCS603B)
	Applied AI	Data Science using Python (PECCS602K)	Pattern Recognition (PECCS603J)
B.Tech in CSBS	Networks	Blockchain, Cryptocurrency & NFT (PECCS602A)	Wireless Sensor Network (PECCS603H)
	Applied AI	Data Science using Python (PECCS602K)	Natural Language Processing (PECCS603B)

University of Engineering and Management
Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur

Subject Name: Computer Networks
Subject Code: PCCCS601

Credit: 3

Lecture Hours: 36

Pre-requisite: Basic knowledge of Data Structures, Digital Electronics

Relevant Links:

[Study Material](#) [Coursera](#) [NPTEL](#) [Linkedin Learning](#) [Infosys Springboard 5G](#)

COURSE OBJECTIVES:

- 1. Build an understanding of the fundamental concepts of computer networking.**
- 2. Familiarize the student with the basic taxonomy and terminology of the computer networking area.**
- 3. Introduce the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.**
- 4. Allow the student to gain expertise in some specific areas of networking such as the design and maintenance of individual networks.**

COURSE OUTCOMES:

CO1: Students will be able to learn the general principles of data communication, topology, protocols and standards, bandwidth utilization etc.

CO2: Students will be able to learn data link layer concept where error correction, error detection mechanisms are there. Students will know the concepts of CRC, flow control, error control protocols, ARQ, ALOHA etc.

CO3: Students will be able to learn the concepts of Network Layer where switching, logical addressing and routing protocols are there. At the same time, students will be able to learn the concepts of transport layers where TCP, UDP, congestion controls are there. Students will be able to know the concepts of leaky bucket and token bucket algorithms also.

CO4: Students will be able to know the concepts of DNS, FTP, and HTTP etc. At the same time, students will be able to learn the different concepts of Cryptography.

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Text with chapter mapping	Corresponding Lab Assignment
1	Data communication Components	Data communication Components: Representation of data and its flow Networks, Various Connection Topology, Protocols and Standards, OSI model, Transmission Media, LAN:	<i>International Academia:</i> (MIT Courseware): https://ocw.mit.edu/courses/6-829-computer-networks-fall-2002/pages/syllabus/ <i>AICTE-prescribed syllabus:</i> https://www.aicte-india.org/sites/default/files/Model_Curriculum/	8	Text book-1 Chapters: 1 to 8 Text book-2 Chapters: page no. 1 to 192 *5G Networks fundamentals* (https://www.coursera.org/learn/5g-network-fundamentals)	<ol style="list-style-type: none"> 1. Make an Ethernet Patch Cable Using Crimper, RJ45 and Twisted Pair Cable and Test it in Cable Tester. Discuss the concept of Straight and Crossover cable. 2. Getting started with Basics of Network configurations files and Networking Commands in Linux. 3. To familiarize and understand the use and

		Wired LAN, Wireless LANs, Connecting LAN and Virtual LAN, Techniques for Bandwidth utilization: Multiplexing - Frequency division, Time division and Wave division, Concepts on spread spectrum, Bluetooth, 5G &6G networks fundamentals.	AICTE%20-%20UG%20CSE.pdf Industry Mapping: Wireshark, Packet Tracer, OPNET, NS3			functioning of System Calls used for Operating system and network programming in Linux. 4. Create a simple topology of two nodes (Node1, Node2) separated by a point-to-point link using NS3 5. Program in NS3 for connecting three nodes considering one node as a central node. 6. Program in NS3 to implement a bus topology.
2	Data Link Layer and Medium Access Sub Layer	Data Link Layer and Medium Access Sub Layer: Error Detection and Error Correction - Fundamentals, Block coding, Hamming Distance,	International Academia: (MIT Open Courseware): https://ocw.mit.edu/courses/6-829-computer-networks-fall-2002/pages/syllabus/ AICTE-prescribed syllabus:	8	Text book-1 Chapters: 9 to 17 Text book-2 Chapters: page no. 193 to 354	7. Implement 1D and 2D parity check. 8. Implement Checksum and CRC parity check. 9. Design ethernet network using OPNET. 10. Design token ring network using OPNET. 11. Design switched local area networks using OPNET.

		<p>CRC; Flow Control and Error control protocols - Stop and Wait, Go back – N ARQ, Selective Repeat ARQ, Sliding Window, Piggybacking, Random Access, Multiple access protocols -Pure ALOHA, Slotted ALOHA, CSMA/CD, CDMA/CA</p>	<p>https://www.aicte-india.org/sites/default/files/Model_Curriculum/AICTE%20-%20UG%20CSE.pdf</p> <p>Industry Mapping: Wireshark, Packet Tracer, OPNET, NS3</p>			
3	Network layer and transport layer	<p>Network Layer: Switching, Logical addressing – IPV4, IPV6; Address mapping – ARP, RARP, BOOTP</p>	<p>International Academia: (MIT Open Courseware): Internetworking and Routing Packet Switching, The Internetworking Problem, IP/TCP Split Connections</p>	14	<p>Text book-1 Chapters: 18 to 24</p> <p>Text book-2 Chapters: page no. 355 to 610</p>	<p>12. Design a Network with Different Users, Hosts, and Services using OPNET.</p> <p>13. Draw diagram to configure 3 pcs, with a Switch and 2 laptops Hubs send packets to each other in Packet Tracer. Specify the difference between Hub and Switch in Simulation Mode.</p>

Syllabus for B. Tech Admission Batch2022

Subject Name: Cloud Computing & IoT Credit: 2 Lecture Hours: 40 Subject

Code: PCCCS602

Pre-requisite: A basic understanding of Networking, public and private networks, and how to architect and implement networking solutions.

Relevant Links:

[Study Material](#)

[Coursera](#)

[NPTEL](#)

[LinkedIn Learning](#)

[Infosys Springboard](#)

COURSE OBJECTIVES:

1. Understand the necessary theoretical background for computing and storage clouds environments.
2. Know the methodologies and technologies for the development of applications that will be deployed and offered through AWS cloud computing environments.
3. Ability to comprehend, design, and develop cloud system using some state-of-the-art platform.
4. Cloud computing security architectural issues, Identity management and Autonomic security.

COURSE OUTCOMES:

CO 1: Articulate the main concepts, key technologies, strengths, limitations of cloud computing and the possible applications for state-of-the-art cloud computing.

CO2: Identify the architecture and infrastructure of cloud computing, including cloud delivery and deployment models.

CO3: Analyze the core issues of cloud computing such as security, privacy, and interoperability.

CO4: Analyze appropriate cloud computing solutions and recommendations according to the applications used.

Module number	Topic	Sub-topics	Text Book Name & Chapter Number	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment
1	Fundamentals of Cloud Computing and AWS	<p>Cloud Computing basics: Introduction to cloud computing, Advantages of Cloud computing, public, private & hybrid cloud, SAAS, PAAS & IAAS.</p> <p>Global Infrastructure: Backbone network, Regions & Availability zone</p> <p>Identity & Access Management: Users, Groups, Roles, Policies, Custom Policies, Multi Factor Authentication, API Key</p> <p>EC2: Virtualization in AWS, EC2 Instance Types, EC2 Instance Families, EC2 Purchasing Options: (On Demand, Spot, Reserved, Dedicated), Creating AMI Images.</p> <p>Elastic Block Storage: EBS Types, EBS vs Instance Storage, Volume, EBS Snapshots, Backups & Replications, Mounting EBS Volumes, Elastic File Storage, Managing EFS File Systems, Mounting</p> <p>EFS File Systems, EFS vs EBS.</p> <p>Load balancers: HA and Scalability Intro, ELB overview, Classic Load balancer, Application Load Balancer, Network Load Balancer, Load Balancer Sticky sessions, Cross zone load balancing, SSL</p>		<p>International Academia: (https://web.stanford.edu/class/cs349d/)</p> <p>AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/AICTE%20-%20UG%20CSE.pdf)</p> <p>Industry Mapping: Amazon, Microsoft, Google</p>	10	

		Certificates				
--	--	--------------	--	--	--	--

2	AWS Database Service and Analytics	<p>Amazon Relational Database Services: Overview of Relational Databases: RDS Instances and RDS Instance Sizes, Supported Databases, Option Groups, Subnet Groups, Parameter Groups, Why Aurora Database? Snapshots, Automated Backups, Reserved Instances, Replications, Encryption, DynamoDB, NoSQL Overview, DynamoDB Concepts, Tables, Backups, Reserved Capacity, Indexes, Transactions, DocumentDB, Elastic Cache. Simple Storage Service (S3):Architectural Overview, Buckets, Objects and Folders, Storage Tiers, Lifecycle policies, Versioning, Locking, Access to S3 Buckets, Static Website Hosting, S3 Cross Region Replications, S3 Bucket Policies,Storage classes + Glacier,Lifecycle rules, events notifications and hands on. CDN, CloudFront and Global Accelerator: Cloud Front overview, CloudFront Signed URL/Cookies, CloudFront Advanced Concepts, AWS Global Accelerator, AWS Global Accelerator. Serverless: Serverless Intro, Lambda overview, Lambda, Lambda Limits and Edge, DynamoDB overview, API Gateway Overview, API Gateway Security, Cognito overview. Monitoring Auditing, CloudWatch Metrics, CloudWatch Custom Metric,</p>		International Standards :(https://web.stanford.edu/class/cs349d/)	10	

		CloudWatch Dashboard and logs, CloudWatch agent and CloudWatch log agent, Cloud Formation.

Syllabus for B.Tech Admission Batch 2022

Subject Name: Introductory Cyber Security

Credit: 3

Tutorial: 3

Subject Code: PECCS601

Course Outcome:

CO1: Understand the importance of cyber security (data confidentiality, Integrity, and Availability) and various recent attacks on important Digital systems such as banking, e-commerce systems, e-governance systems etc.

CO2: Understand basic cryptography concepts – symmetric vs. asymmetric cryptography, Public Key Crypto Infrastructure (PKI), Symmetric Ciphers, Hashing, and Digital Signatures.

CO3: Understand methods and tools for authentication, authorization, privilege, and their needs in securing an organization's IT system, Intrusion Detection (network and host intrusion detection) and perimeter security (firewall).

CO4: Understand the basic malware functions and indicators of compromise as well as common vulnerabilities in applications, web applications, network, and the Internet Infrastructure.

Desirable/Advanced Outcome:

- 1. Understand basic mobile application security issues and android platform architecture for securing app execution.**
- 2. Understand wireless LAN security issues.**

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Tutorial	Corresponding Practical (Hands On) Questions
1	Introduction and basic terminology	Cyber Security and CIA Triad, basic cyber threats to CIA, cyber-attack surfaces, recent cyber-security incidents and their high-level analysis	<p><i>International Academia:</i> Syllabus / Network and Computer Security / Electrical Engineering and Computer Science / MIT OpenCourseWare</p> <p><i>AICTE-prescribed syllabus:</i></p> <p><i>Industry Mapping:</i> https://www.linkedin.com/learning/cybersecurity-foundations-22006082</p>	3	<p>1. Example Driven Lectures with examples drawn from most recent incidents</p> <p>Assignment 1: Google Dorking - Here we see how we gather information using Browser</p> <p>Assignment 2: Setup Cybersecurity Lab - Here we setup kali linux machine on our windows.</p> <p>Assignment 3: Learning Basic Linux commands. - Here we can see how we can use Linux.</p> <p>Assignment 4: Identify Your Digital Footprint. - Learn about personal cybersecurity risks.</p> <p>Tools: Google, DuckDuckGo, VMware, Kali Linux.</p>
2	Basic Cryptography	<p>Role of Cryptography in ensuring confidentiality for data at rest, data in motion, and data in process.</p> <p>Symmetric and Asymmetric Cryptography, their needs as complementary of each other, some basic symmetric and asymmetric algorithm outlines (RSA, DH, DES, AES)</p> <p>Role of cryptography in data integrity, non-repudiation</p>	<p><i>International Standards:</i> Advanced Topics in Cryptography / Electrical Engineering and Computer Science / MIT OpenCourseWare</p> <p><i>AICTE prescribed syllabus:</i></p> <p><i>Industry</i></p>	6	<p>1. Using library functions to use RSA, AES, and SHA 256 and show the result of encryption, Hashing etc.</p> <p>2. Taking apart a digital certificate and show the various components and their significance.</p> <p>Assignment 1: Symmetric Encryption and Decryption - Understand how symmetric key</p>

		<p>Hashing and Digital Signature and some example hash function outlines (MD5, SHA-256), understanding digital signature and its role.</p> <p>Digital Certificate and PKI.</p> <p>Importance of the role of a proper Pseudo Random Number Generator.</p>	<p><i>Mapping:</i> Keeping information safe / LinkedIn Learning</p>		<p>encryption works using tools like OpenSSL or Python.</p> <p>Assignment 2: Hashing and Integrity Verification- Learn to generate and verify file hashes using hashing algorithms like MD5, SHA-256.</p> <p>Tools: Kali linux, Cyber Chef</p>
3	Authentication, Authorization and Privilege	<p>Importance of strong Authentication, distinction between authentication and authorization, importance of authorization, access control, Mandatory and Discretionary Access control, role based authorization, privilege and privilege escalation</p>	<p><i>International Standards:</i> Computer Systems Security Electrical Engineering and Computer Science / MIT OpenCourseWare</p> <p><i>AICTE prescribed syllabus:</i></p> <p><i>Industry Mapping:</i> Verify identity and access privileges / LinkedIn Learning</p>	3	<ol style="list-style-type: none"> 1. Lab on 2 factor authentication, 2. Lab on privilege escalation example <p>Assignment1: Privilege Escalation Lab setup. - Here we setup our own privilege exclamation lab.</p> <p>Assignment 2: Kioptrix lab setup and Box Hacking - Here we can see how can we gain access with a system</p> <p>Assignment 3: Blu box Hacking - Here we see how we gain access to a WIN7 machine by exploiting a well-known vulnerability.</p> <p>Assignment 4: Mr. Robot Box Hacking - Here we see how we gain a access to a machine and how can we gain access.</p> <p>Assignment 5: Linux Privilage Exclaration Here we can see some basic privilege technics of linux</p> <p>Tools: Kali linux, Metasploite, nmap</p>

4	Application Security	<p>Basic application vulnerabilities (Buffer overflow, Integer Overflow, format string vulnerability), Basic mitigations of buffer overflow – platform bases, compiler based, secure programming practice</p> <p>Web Client Security, Same Origin Principle, DOM, Java Script Vulnerability, Cookies and Cookie Attributes Secure, http only, Concept of session and session ID, Session hijacking vulnerability, http vs. https and SSL/TLS and version issue</p> <p>Web Server Security – XSS, CSRF, SQL Injection, Command Injection concepts, examples of each and mitigation techniques</p>	<p><i>International Standards Computer Systems Security / Electrical Engineering and Computer Science / MIT OpenCourseWare</i></p> <p><i>AICTE prescribed syllabus:</i></p> <p><i>Industry Mapping Learn to secure applications / LinkedIn Learning</i></p>	15	<p>2. Buffer overflow, integer overflow and format string vulnerability testing in vulnerable applications.</p> <p>2. DVWA based command injection. SQL injection, XSS and CSRF</p> <p>Assignment 1: Burp Suite Setup - Here we can see how we can capture a request or response using burpsuite</p> <p>Assignment 2: Lab setup (Metasploitable 2) Here we setup a web hacking box</p> <p>Assignment 3: Broken authentication - Here we see how to perform a broken authentication vulnerability in a website</p> <p>Assignment 4: SQL Injection - Here we see how to perform a SQL Injection vulnerability in a website</p> <p>Assignment 5: CSRF - Here we see how to perform a CSRF vulnerability in a website</p> <p>Assignment 6: XSS - Here we see how to perform a XSS Vulnerability in a website</p> <p>Tools: Burpsuite, Webgoat, Nessus, OpenVas</p>
---	-----------------------------	--	---	----	--

5	Perimeter protection and Intrusion Detection	<p>Host Intrusion Detection techniques, what are the indicators to look for and how an SIEM tool can consolidate such indicators into a management console</p> <p>Network Intrusion Detection – signature based vs. behavior based, Snort</p> <p>Firewall vs. Intrusion Detection tool, Firewall rules and customization techniques</p>	<p><i>International Standards Computer Systems Security / Electrical Engineering and Computer Science / MIT OpenCourseWare</i></p> <p><i>AICTE prescribed syllabus:</i></p> <p><i>Industry Mapping Securing the network / LinkedIn Learning</i></p>	6	<p>1. Students are asked to install Wazuh and monitor a host.</p> <p>2. Students are asked to install snort and monitor a network on their local network</p> <p>Assignment 1: wireshark - Here we see how network traffic flows</p> <p>Tools: kali linux, Wireshark</p>
6	Basic Malware Analysis	<p>Various malware classes and their characteristics</p> <p>Difference between static analysis and dynamic analysis</p> <p>Signature vs. behavioral detection techniques</p>	<p><i>International Standards Network and Computer Security / Electrical Engineering and Computer Science / MIT OpenCourseWare</i></p> <p><i>AICTE prescribed syllabus:</i></p> <p><i>Industry Mapping: Understanding what malware is and how it behaves / LinkedIn Learning</i></p>	3	<p>1. US static analysis tools to find how an executable can be analyzed.</p> <p>Assignment 1: Making a Malware - Here we make a basic malware</p> <p>Assignment 2: Windows hack using a Malware - Here we hack our own windows machine using a malware</p> <p>Tools: Kali Linux, Metaspolite</p>

Detailed Contents for Desirable Learning Outcomes (optional, <= 3 modules):

Module Number	Topics	Sub-topics	Pedagogy teaching suggestions	Tutorial	Corresponding Practical (Hands On) Questions
7	Mobile Application Security	<p>Basic mobile attack surface and the ideas of permissions, and their abuse</p> <p>Execution model of mobile apps in Android (Sandboxing) and communication</p>	<p>Provide intuition on mobile malware and how they work, give example of mobile malware attacks, provide intuition of execution model of Android and demonstrate Mandatory Access</p>	3	Expert Lecture

			Control idea in action, SE Linux being part of Android		
8	WLAN Security	Some common ways WLAN are compromised including weak cipher such as WEP, evil twin attack, unauthorized access point based attacks (rogue WLAN) etc.	Provide students idea about how to look for signs of these rogue WLAN, evil twins, public Wi-Fi etc.	3	Expert Lecture

Syllabus for B.Tech Admission Batch 2022

Subject Name: BLOCKCHAIN, CRYPTOCURRENCY & NFT
Subject Code: PECCS602A

Credit: 3

Lecture Hours: 32

Course Objective:

- Obj 1:** The objective of this course is to provide conceptual understanding of how block chain technology
- Obj 2:** How blockchain can be used to innovate and improve business processes

Prerequisites: Computer Network, Cryptography basics

[Study Material](#)

[Coursera](#)

[NPTEL](#)

[Linkedin Learning](#)

[Infosys Springboard](#)

Course Outcome:

- CO1:** Understand block chain technology.
- CO2:** Develop block chain based solutions and write smart contract using Hyperledger Fabric and Ethereum frameworks.
- CO3:** Build and deploy block chain application for on premise and cloud based architecture.
- CO4:** Integrate ideas from various domains and implement them using block chain technology in different perspectives.

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment	Book Chapter Mapping
1	Introduction	Overview of Block chain, Public Ledgers, Bitcoin, Smart Contracts, Block in a Block chain, Transactions, Distributed Consensus, Public vs Private Block chain, Understanding Crypto currency to Block chain, Permissioned Model of Block chain, Overview of Security aspects of Block chain Basic Crypto Primitives: Cryptographic Hash Function, Properties of a hash function, Hash pointer and Merkle tree, Digital Signature, Public Key Cryptography, A basic cryptocurrency	International Academia https://ocw.mit.edu/courses/15-s12-blockchain-and-money-fall-2018/pages/syllabus/ AICTE- prescribed Syllabus chrome-extension://efaidnbmnnnibpcajpcgclcfefndmkaj/https://www.aicte-india.org/sites/default/files/UG_Emerging.pdf	6	Install and understand Docker container, Node.js, Java and Hyperledger Fabric, Ethereum and perform necessary software installation on local machine/create instance on Cloud to run. https://github.com/hyperledger/ https://docs.docker.com/get-started/ https://console.ng.bluemix.net/docs/services/blockchain/index.html	1. Chandramoli - Chapter 1, 2 2. Saurabh - Chapter 1, 2, 3, 6 3. Choudhari - Chapter 1, 2
2	Understanding Block chain with Crypto currency	Bitcoin and Block chain: Creation of coins, Payments and double spending, Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay. Working with Consensus in Bitcoin: Distributed consensus in open environments, Consensus in a Bitcoin network, Proof of Work (PoW) – basic introduction, Hashcash PoW, Bitcoin PoW, Attacks on PoW and the monopoly problem, Proof of Stake, Proof of Burn and Proof of Elapsed Time, The life of a Bitcoin Miner, Mining Difficulty, Mining Pool.	International Academia https://ocw.mit.edu/courses/15-s12-blockchain-and-money-fall-2018/pages/syllabus/ AICTE- prescribed Syllabus chrome-extension://efaidnbmnnnibpcajpcgclcfefndmkaj/https://www.aicte-india.org/sites/default/files/UG_Emerging.pdf	10	Create and deploy a block chain network using Hyperledger Fabric SDK for Java Set up and initialize the channel, install and instantiate chaincode, and perform invoke and query on your block chain network (https://developer.ibm.com/patterns/create-and-deploy-blockchain-network-using-fabric-sdk-java/)	1. Chandramoli - Chapter 2, 3, 4 2. Saurabh - Chapter 4, 8 3. Choudhari - Chapter 2, 3

3	Understanding Block chain for Enterprises	Permissioned Block chain: Permissioned model and use cases, Design issues for Permissioned block chains, Execute contracts, State machine replication, Overview of Consensus models for permissioned block chain- Distributed consensus in closed environment, Paxos, RAFT Consensus, Byzantine general problem, Byzantine fault tolerant system, Lamport-Shostak-Pease BFT Algorithm, BFT over Asynchronous systems. Enterprise application of Block chain: Cross border payments, Know Your Customer (KYC), Food Security, Mortgage over Block chain, Block chain enabled Trade, We Trade – Trade Finance Network, Supply Chain Financing, Identity on Block chain	International Academia https://ocw.mit.edu/courses/15-s12-blockchain-and-money-fall-2018/pages/syllabus/ AICTE- prescribed Syllabus chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/ https://www.aicte-india.org/sites/default/files/UG_Emerging.pdf	10	Interact with a block chain network. Execute transactions and requests against a block chain network by creating an app to test the network and its rules (https://developer.ibm.com/patterns/interacting-with-a-block-chain-network/)	1. Chandramoli - Chapter 2, 3, 6, 10 2. Saurabh - Chapter 4, 10 3. Choudhari - Chapter 4, 7
4	ETHEREUM AND BLOCKCHAIN APPLICATIONS	Ethereum - Ethereum Virtual Machine, (EVM) - Wallets for Ethereum - Solidity - Smart Contracts	International Academia https://ocw.mit.edu/courses/15-s12-blockchain-and-money-fall-2018/pages/syllabus/ AICTE- prescribed Syllabus chrome-extension://efaidnbmnnnibpcajpcglclefindmkaj/ https://www.aicte-india.org/sites/default/files/UG_Emerging.pdf Industry Mapping SOLIDITY	6	Deploy an asset-transfer app using block chain. Learn app development within a Hyperledger Fabric network (https://developer.ibm.com/patterns/deploy-an-asset-transfer-app-using-block-chain/)	1. Chandramoli - Chapter 4, 5 2. Saurabh - Chapter 5, 7 3. Choudhari - Chapter 5

Course Outcome:

After completion of course, students would be able to:

- CO 1: Understand, Identify and describe soft computing techniques and their roles in real life problems
- CO 2: Apply a soft computing methodology for a particular problem
- CO 3: Annalise and compare various soft computing approaches for a given problem
- CO 4: Formulate soft computing solutions for various problems.

List of Assignments

Fuzzy Logic

1.	Fuzzification of Sepal Length: Given the sepal lengths in the Iris dataset, construct fuzzy sets for three categories: Short , Medium , and Long . Assume Sepal Length values range from 4.3 to 7.9 cm. Define fuzzy membership functions using triangular or trapezoidal shapes for these categories. For a sepal length of 5.5 cm, calculate the membership values for each fuzzy set.
2.	Fuzzy Classification of Iris Species: Use fuzzy rules based on sepal length and petal length to classify an iris flower. Define rules like: a. If Sepal Length is Short and Petal Length is Short, then Species is Iris-setosa. b. If Sepal Length is Long and Petal Length is Long, then Species is Iris-virginica For a flower with a Sepal Length of 5.2 cm and a Petal Length of 3.8 cm, calculate the degree of membership for each species.
3.	Fuzzy Intersection (AND operation): Define two fuzzy sets: Sepal Length = Medium and Petal Width = Medium. For a flower with Sepal Length = 5.8 cm and Petal Width = 1.5 cm, calculate the fuzzy membership values for both sets and find the intersection (minimum operator).

4.	Fuzzy Union (OR operation): Define two fuzzy sets: Petal Length = Short and Sepal Width = Narrow. For a flower with Petal Length = 3.0 cm and Sepal Width = 2.8 cm, calculate the fuzzy membership values for both sets and find the union (maximum operator).
5.	Fuzzy Complement: Consider a fuzzy set Petal Width = Wide. Define its membership function over the Petal Width range of 0.1 to 2.5 cm. For a flower with Petal Width = 1.8 cm, calculate the membership value for the Wide set and the complement (not wide).
6.	Defuzzification Using Centroid Method: Using fuzzy sets for Short, Medium, and Long Sepal Length, and given a fuzzy output of membership degrees {Short = 0.2, Medium = 0.7, Long = 0.1}, calculate the defuzzified (crisp) Sepal Length using the centroid method.
7.	Fuzzy Rule Base for Iris Classification: Construct a fuzzy rule base with rules such as: a. If Sepal Length is Long and Petal Width is Wide, then Species is Iris-virginica. b. If Sepal Length is Short and Petal Width is Narrow, then Species is Iris-setosa. Given a flower with Sepal Length = 6.1 cm and Petal Width = 1.9 cm, evaluate the fuzzy rules and compute the degree of membership for each species.

8.	<p>Fuzzy Aggregation (OR operation in rule evaluation): Assume you have two fuzzy rules:</p> <ol style="list-style-type: none">If Sepal Width is Wide, then Species is Iris-versicolor.If Petal Length is Medium, then Species is Iris-versicolor. <p>Given Sepal Width = 3.2 cm and Petal Length = 4.5 cm, calculate the aggregated membership for Iris-versicolor using the maximum operator.</p>
9.	<p>Fuzzy Inference for Petal Width: Create a fuzzy inference system for Petal Width based on Sepal Length and Petal Length. Define fuzzy sets for Narrow, Medium, and Wide petal widths. For a flower with Sepal Length = 5.4 cm and Petal Length = 4.1 cm, infer the degree of membership for each Petal Width fuzzy set.</p>
10.	<p>Comparison of Fuzzy and Crisp Classifications: Classify a sample from the Iris dataset using a crisp classifier (e.g., based on threshold values of Sepal and Petal dimensions) and compare it to a fuzzy logic-based classification for the same sample. For example, classify a flower with Sepal Length = 6.3 cm, Sepal Width = 3.3 cm, Petal Length = 4.7 cm, and Petal Width = 1.6 cm using both methods.</p>

Neural Network

1.	Input and Output Representation: Given the Iris dataset has 4 input features (Sepal Length, Sepal Width, Petal Length, and Petal Width) and 3 possible classes (Iris-setosa, Iris-versicolor, Iris-virginica), represent the input vector for a sample with Sepal Length = 5.1, Sepal Width = 3.5, Petal Length = 1.4, and Petal Width = 0.2. How would the output be encoded using one-hot encoding for the class Iris-setosa?
2.	Neuron Activation (Single Neuron): A neuron in a neural network has weights $w_1 = 0.5, w_2 = -0.3, w_3 = 0.8$ and $w_4 = -0.2$ and a bias $b=0.1$. For an input vector $[5.1, 3.5, 1.4, 0.2]$, calculate the weighted sum (net input) before applying the activation function.
3.	Sigmoid Activation Function: Using the net input calculated in Question 2, apply the sigmoid activation function $\sigma(x) = \frac{1}{1+e^{-x}}$. What is the output of the neuron after applying the activation function?
4.	Feedforward in a Single Layer Neural Network: Consider a single-layer neural network with 4 inputs (Sepal Length, Sepal Width, Petal Length, and Petal Width) and 3 output neurons (one for each Iris species). The weight matrix W is: $\mathbf{w} = \begin{bmatrix} 0.2 & -0.1 & 0.4 & 0.5 \\ -0.3 & 0.8 & -0.2 & -0.1 \\ 0.6 & 0.3 & 0.2 & 0.4 \end{bmatrix}$ and the bias vector $\mathbf{b}=[0.1, -0.2, 0.3]$. For the input vector $[5.1, 3.5, 1.4, 0.2]$, calculate the output of the network before applying any activation function.

5.	Softmax Function for Classification: Given the outputs from Question 4 as $[1.2, 0.8, -0.5]$, apply the softmax function to convert these raw outputs into probabilities. What is the predicted class?
6.	Backpropagation: A neural network with one hidden layer has two neurons in the hidden layer and one output neuron. The input to the hidden layer is $[1.2, 0.5]$, and the weights connecting the hidden layer to the output are $w_1=0.7$ and $w_2=-0.4$. If the output is 0.6 and the target is 1, calculate the error signal for the output neuron using the squared error loss. Then compute the gradient of the loss with respect to w_1 and w_2 .

Genetic Algorithm

1.	Chromosome Representation: In a genetic algorithm, each individual (solution) can be represented as a chromosome. For the Iris dataset, consider a chromosome that represents feature selection for a classifier. If there are 4 features (Sepal Length, Sepal Width, Petal Length, Petal Width), represent a chromosome as a binary string where each bit indicates whether the corresponding feature is selected or not. For example, [1,0,1,0]. How many different chromosomes (solutions) can be generated for this feature selection problem?
2.	Fitness Calculation: Assume you are using a genetic algorithm to evolve a classifier for the Iris dataset. The fitness of a solution is defined as the accuracy of the classifier on a validation set. If the accuracy for three individuals (chromosomes) is 80%, 75%, and 90%, what are the fitness values for these individuals?
3.	Selection Probability (Roulette Wheel Selection): Using the fitness values from Question 2 (80%, 75%, and 90%), calculate the selection probability for each individual using roulette wheel selection.
4.	Crossover Operation: Consider two parent chromosomes for feature selection: Parent 1: [1,0,1,1] Parent 2: [0,1,0,1]. Perform single-point crossover at the second position and generate the offspring. Mutation Operation: A chromosome for feature selection is represented as [1,1,0,0]. If the mutation probability is 0.1, what is the likelihood that at least one gene (bit) will mutate in this chromosome?

6.	Population Diversity: Consider a population of 5 individuals with the following chromosomes representing feature selection: [1,0,0,1], [1,1,0,0], [0,1,1,1], [1,0,1,0], [0,0,1,1]. Calculate the Hamming distance between the first chromosome [1,0,0,1] and the other chromosomes in the population.
7.	Convergence Criterion: In a genetic algorithm, a typical convergence criterion is when the population reaches a certain fitness threshold. If the threshold is set at 95% accuracy, and after 50 generations, the top individuals have fitness values of 88%, 90%, 94%, and 95%, has the algorithm converged? Justify your answer based on the fitness values.
8.	Generational Progress: Assume a genetic algorithm starts with a population where the average fitness is 70%. After 10 generations, the average fitness is 85%. If the average fitness increases by 1.5% per generation on average, in how many more generations would you expect the average fitness to reach 95%?

Multi-Objective Optimization

1.	Find the Pareto front based on minimizing Sepal Length and Sepal Width from the Iris dataset. Plot the results and highlight the Pareto-optimal solutions.
2.	Weighted Sum Approach for Two Objectives: Create a weighted sum function that combines two objectives: minimizing Sepal Length and Petal Length from the Iris dataset. Allow the user to set different weights for the two objectives and find the sample with the lowest weighted score.
3.	Multi-Objective Genetic Algorithm (GA): Implement a multi-objective genetic algorithm to perform feature selection in the Iris dataset. The objectives are to maximize classification accuracy and minimize the number of selected features.
4.	NSGA-II Optimization for Multi-Objective Iris Classification: Implement the NSGA-II algorithm to optimize both Sepal Width and Petal Width using the Iris dataset. Find the Pareto-optimal solutions and visualize the results.
5.	Multi-Objective Optimization with Crossover and Mutation Rates: Write a Python program to optimize two objectives, minimizing Sepal Length and maximizing Petal Length, by implementing genetic operations such as crossover and mutation. Adjust the crossover and mutation rates dynamically and observe the impact on optimization results.

Swarm intelligence

1.	Create a novel Swarm Intelligence-based clustering algorithm (e.g., a PSO-based clustering method) to classify the Iris dataset into its three species. The swarm algorithm should adaptively partition the dataset based on feature similarity, and evaluate the clustering results using metrics like Silhouette Score and Davies-Bouldin Index.
2.	Design and implement a Bee Colony-based clustering algorithm for the Iris dataset. The algorithm should simulate a bee colony searching for optimal cluster centroids that minimize the intra-cluster distance and maximize the inter-cluster distance. Implement a mechanism for the bees to dynamically adjust their position in the feature space based on their fitness evaluation.
3.	Ant Colony Optimization (ACO)-based algorithm to cluster the Iris dataset into its three species. The algorithm should simulate ants searching for the optimal positions of centroids, using fitness functions such as intra-cluster compactness and inter-cluster separation. Evaluate the effectiveness of your clustering algorithm

Subject Name: Information Theory & Coding

Credit: 3

Lecture Hours: 36

Subject Code: PECCS602E

Course Outcome:

After studying this course, students will be able to:

1. Explain the concept of Dependent & Independent Source, a measure of information, Entropy, Rate of information and Order of a source
- 2 Represent the information using Shannon Encoding, Shannon Fano, Prefix, and Huffman Encoding Algorithms
3. Model the continuous and discrete communication channels using input, output and joint probabilities
4. Determine a code word comprising of the check bits computed using Linear Block codes, cyclic codes & convolutional codes and also can design the encoding and decoding circuits for Linear Block codes, cyclic codes, convolutional codes, BCH and Golay codes.

Course Outcome:

- CO1. Understand and explain the channel models of 5G and the use cases for 5G
- CO2. Analyse use of MIMO in 5G and its techniques.
- CO3. Draw and explain 5G architecture, its components and functional criteria and understand device to device (D2D) communication and standardization.
- CO4. Study the in-depth functioning of 5G radio access technologies and understand interference management, mobility management and security issues in 5G.

List of Assignments

1.	<p>A URLLC system requires a data rate of 500 Mbps for a mission-critical application. The signal-to-noise ratio (SNR) is measured to be 15 dB. Using Shannon's capacity theorem, calculate the minimum bandwidth required to support this data rate.</p> <p>Given: Data rate $R=500$ Mbps SNR $SNR_{dB}=15$ dB</p>
2.	<p>A URLLC system requires a 99.9999% reliability (outage probability $P_{outage}=10^{-6}$) when transmitting packets of 128 bits. The system uses a modulation scheme with a target BLER of 10^3 per transmission attempt. If Automatic Repeat Request (ARQ) is used, how many retransmissions are needed on average to achieve the required reliability?</p> <p>Given:</p> <ul style="list-style-type: none">• Packet size: 128 bits• Required reliability: $P_{outage}=10^{-6}$• Target BLER per transmission: $P_e=10^{-3}$
3.	<p>In a CoMP-enabled system, a user at the cell edge is served by two base stations using joint transmission. Each base station provides a data rate of 50 Mbps if serving the user independently. However, due to joint transmission with perfect coordination, the user can effectively use both channels simultaneously. Calculate the total throughput experienced by the user when CoMP joint transmission is applied.</p> <p>Given:</p> <ul style="list-style-type: none">• Data rate per base station (independently): 50 Mbps• Number of base stations in joint transmission: 2

4.	<p>Given: A 2x2 MIMO system with two transmit antennas and two receive antennas.</p> <p>The channel matrix for the MIMO system is: $H = \begin{bmatrix} 1 & 0.5 \\ 0.3 & 1.2 \end{bmatrix}$</p> <p>The signal-to-noise ratio (SNR) per antenna is 10 dB.</p> <p>Find the channel capacity for this MIMO system.</p>
5.	<p>Given: A 4x4 MIMO-OFDM system with 4 transmit and 4 receive antennas. There are 64 subcarriers in the OFDM system. The total transmitted power P_{total} is 1 W.</p> <p>Find the optimal power allocation for each subcarrier assuming equal power allocation across subcarriers.</p>
6.	<p>Given:</p> <p>A 5G network with small cells in a dense urban environment.</p> <p>Each small cell supports 100 users.</p> <p>The available bandwidth per small cell is 100 MHz.</p> <p>The data rate per user is 10 Mbps.</p> <p>Find the total capacity of the 5G small cell network in terms of data rate.</p>
7.	<p>Given:</p> <p>The end-to-end latency requirement for a 5G network is 1 ms.</p> <p>The RAN latency accounts for 0.4 ms.</p> <p>The core network latency accounts for 0.3 ms.</p> <p>The backhaul latency is 0.2 ms.</p> <p>Find the maximum latency allowed in the air interface (radio access network) in 5G.</p>

8.	<p>Given: A SCMA system uses 4 subcarriers with 4 users. Each user is assigned a 4-dimensional sparse codebook. The signal-to-noise ratio (SNR) per user is 12 dB. The codebook has 16 possible codewords. Find the total capacity of the SCMA system for these 4 users.</p>
9.	<p>Given: A SCMA system with 3 users, each using a 4-dimensional codebook. The received signal at the receiver is $y=h \cdot x+n$, where: x is the transmitted codeword, h is the channel gain vector, n is the noise vector. The SIC decoder uses a decision rule based on the channel gains and SNR of each user. Find the probability of successful SIC decoding when the SNR per user is 10 dB.</p>
10.	<p>Given: A SCMA system uses a 4-user scenario, each user utilizing a 4-dimensional sparse codebook. The SNR per user is 14 dB. The codebook has 16 codewords. Find the Bit Error Rate (BER) for the system using SCMA when each user transmits a 4-bit symbol.</p>

11.	<p>Given: A MIMO system with 4 transmit antennas and 4 receive antennas. The transmitter sends a signal with a power of 20 W (43 dBm). The channel loss between the antennas is 100 dB. The receiver's antenna gain is 12 dBi, and the transmitter's antenna gain is 15 dBi. Find the received signal power (in dBm).</p>
12.	<p>Given: A 2x2 MIMO system. The received signal vector at the receiver is $y=[3,4]$. The transmitted signal vector is $x=[1,2]$. The noise vector is $n=[0.5,0.8]$. Find the signal-to-noise ratio (SNR) for this MIMO system.</p>

Syllabus for B.Tech Admission Batch 2022

Subject Name: Embedded Systems
Credit:3

Subject Code: PECCS602J
Lecture Hours: 36

Pre-requisite:

1. Computer organization and architecture
2. Operating system
3. Concepts of assembly language

Course Outcome:

1. Students will gain knowledge of the basic functions, structure, concepts and applications of embedded systems.
2. Students will learn designing and programming embedded systems for real-time applications.
3. Students will understand and apply the concept of operating system in real-time applications.
4. Students will gain knowledge of basic communication protocols, real time operating systems (RTOS), sensors, memory interface and communication interface.

Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur

Course Name: Data Science Using Python

Course Code: PECCS602K

Semester: VI

Contact Hours: 36

Credit: 3

Prerequisites: Familiarity with Python programming, including basic concepts like loops, conditional statements, and functions.

Students will be able to Learn

1. Techniques for handling missing values, encoding, normalization, feature selection, and dimensionality reduction.
2. Create and interpret visualizations using Matplotlib and Seaborn to explore data distributions and relationships.
3. Perform hypothesis testing, ANOVA, and chi-squared tests to validate assumptions and extract insights.
4. Develop models like K-Means, KNN, SVM, and Neural Networks for clustering and classification tasks.

Syllabus and Lesson Plan for B.Tech Admission Batch 2022

Subject Name: Digital Forensics

Credit: 3

Lecture Hours: 36

Subject Code: PECCS602A

Maximum: 100 marks (Internal: 30 marks; External: 70 marks)

List of Faculty Members handling the Subject -

1. Prof. Soumya Sen (UEM, Jaipur)
- 2.
- 3.

Pre-requisite: Basic understanding of computer systems and networks, Familiarity with operating systems

Course Objective:

1. Understand the Fundamentals of Digital Forensics.
2. Develop Skills in Forensic Tools and Techniques.
3. Analyze and Interpret Digital Evidence.
4. Understand Legal and Ethical Implications.
5. Apply Forensic Techniques to Emerging Technologies

Course Outcome:

CO 1: Students will be able to explain the process of investigating computer crime

CO 2: Perform initial decision making process

CO 3: Students will acquire a knowledge about accessing the situation

CO 4: They will be able to notify decision makers and acquire authorization

CO 5: Review Policies and Laws related to forensics investigation process.

CO 6: Report the investigation

Project : Applying Practises

Given the contents of three computers from individuals suspected to be involved in credit card fraud, find evidence connecting the three individuals to the fraud case. This involved finding discord and email caches which included hints towards conversations between the three individuals. One of the individuals was an undercover cop and had hacked another's laptop to record the keystrokes, allowing us to discover their passwords.

Write a report explaining what happened, presenting evidence and where it was found.

1. Speech and Language Processing”. Authors: Daniel Jurafsky and James H. Martin, Pearson Publications.
2. Multilingual natural Language Processing Applications: From Theory to Practice–Daniel M.Bikel and Imed Zitouni, Pearson Publication.

Assignment List

Assignment 1: Create a Python application that tokenises a statement into individual words.

Test Case:

Input: "Hello, how are you?"

Output: ["Hello", "how", "are", "you"]

Assignment 2: Implement a Python application using a stemming algorithm (e.g., nltk's PorterStemmer) to reduce words to their root form, and validate it with the test case programming → program.

Assignment 3: Develop a Python program that utilizes a stemming algorithm, such as the one provided by the nltk library, to efficiently reduce a given word to its lexical root. Validate your implementation by testing it with the input "running" and confirming the output as "run".

Input:

programming

Expected Output:

mathematica

Copy code

Original Word: programming

Stemmed Word: program

Assignment 4: Develop a Python program leveraging a lemmatization technique (e.g., nltk's WordNetLemmatizer) to transform a given word into its canonical base form, and validate it using the input "running" to produce the output "run".

Assignment 5: Design a Python-based solution utilizing a POS tagging module (e.g., nltk's pos_tag) to accurately identify and label the part-of-speech tags for each word in a given sentence, validating it with the input "The dog chased the cat." to produce the output [("The", "DT"), ("dog", "NN"),]

Assignment 6: Develop and execute a Python-driven approach to identify named entities within a given sentence, leveraging a named entity recognition module (e.g., nltk's ne_chunk), and validate it using the input "John Smith works at Google." to produce the output [("John Smith", "PERSON"), ("Google", "ORGANIZATION")].

Assignment 7: Develop and implement a Python-based approach utilizing a sentiment analysis library (e.g., TextBlob or VADER) to determine the sentiment polarity of a given sentence, validating it with the input "I love this product!" to produce the output "Positive".

Assignment 8: Create a Python-based text preprocessing program that standardizes input by converting it to lowercase, removing punctuation, and eliminating stopwords using libraries such as nltk or re. Validate the program using the input "This is a sample text. It contains punctuation and stopwords." to produce the output "sample text contains".

Assignment 9: Develop and implement a Python program to compute the frequency distribution of words in a given text, validating it with the input "This is a sample text. This text is just a sample." to produce the output {"this": 2, "is": 2, "a": 2, "sample": 2, "text": 2}.

Assignment 10: Create a Python-based solution to calculate the semantic similarity between two sentences using techniques like cosine similarity or word embeddings, validating it with the input "This is a sample sentence." and "This sentence is just a sample." to produce a similarity score of 0.8.

Assignment 11: Develop and implement a Python-based solution to compute the Term Frequency-Inverse Document Frequency (TF-IDF) scores for a small dataset using libraries such as sklearn, validating it with the input {'text': ['This is a sample document.', 'Another document with different content.']} to generate the TF-IDF matrix.

Assignment 12: Develop and implement a Python program that performs text operations including counting the number of words in a sentence, counting the number of characters in a string, and replacing a substring within a string, validating with inputs such as "This is a sample sentence." to output 5, "hello" to output 5, and ("hello world", "world", "universe") to output "hello universe".

Projects

1. Sentiment Analysis in Social Media
2. Healthcare Information Extraction from Medical Reports
3. Creating a News Corpus for Topic Modeling

Syllabus for B.Tech Admission Batch 2022

Subject Name: Distributed Systems

Credit: 3

Lecture Hours: 36

Subject Code: PECCS603C

Pre-requisite: Basic knowledge of Operating Systems, Computer Networks and Database Management Systems.

Relevant Links:

[Study Material](#)

[Coursera](#)

[NPTEL](#)

[Linkedin Learning](#)

[Infosys Springboard](#)

COURSE OBJECTIVES:

1. Students will have a comprehensive understanding of distributed systems, focusing on their fundamental principles, goals.
2. To make aware of advanced concepts in distributed systems, including communication protocols, synchronization mechanisms, and distributed algorithms.
3. To provide students with a thorough understanding of distributed transactions, concurrency control mechanisms, and fault-tolerant techniques in distributed systems.
4. To provide students with a deep understanding of termination detection, message ordering, and self-stabilization techniques, as well as real-world applications.

COURSE OUTCOMES:

CO 1: Students will be able to define distributed systems, analyze their core objectives such as scalability and fault tolerance, and evaluate the role of hardware concepts and software concepts in the design and implementation of distributed systems.

CO 2: Students will be able to apply layered protocols, Remote Procedure Calls (RPC), and message-oriented communication in distributed environments.

CO 3: Students will be able to analyze and implement flat and nested distributed transactions, apply various concurrency control methods such as locks, optimistic concurrency control, and timestamp ordering.

CO 4: students will be able to apply termination detection algorithms in distributed systems, implement message ordering protocols, and understand the principles of self-stabilization for fault recovery in distributed environments.

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment
1	Basic Concept	Definition of a distributed systems, Goals, Hardware concepts- Multiprocessors, heterogeneous multicomputer systems, homogeneous multicomputer systems, Software concepts- Distributed OS, Networked OS, Client-server model	<p>International Academia: (https://ocw.mit.edu/course/s/6-824-distributed-computer-systems-engineering-spring-2006/pages/syllabus/) (https://online.stanford.edu/courses/cs244b-distributed-systems)</p> <p>Industry Mapping: SimGrid</p>	10	<p>Assignment 1: Analyzing Distributed Systems Goals and Architecture</p> <p>Task: Examine the goals of distributed systems and their relationship to hardware and software concepts.</p> <ol style="list-style-type: none"> 1. Break down the primary goals of distributed systems, such as resource sharing, transparency, scalability, and fault tolerance. 2. Analyze how these goals influence the choice between hardware architectures (e.g., multiprocessors, heterogeneous multicomputer systems) 3. Explain how software systems like Distributed Operating Systems (Distributed OS) and Networked Operating Systems

				<p>(Networked OS) support achieving these goals.</p> <p>Instructions:</p> <ol style="list-style-type: none"> 1. Create a comparison table or chart that illustrates how different hardware concepts (multiprocessors, homogeneous systems, and heterogeneous systems) align with the goals of distributed systems. 2. Write a short analytical essay (300–400 words) explaining how software concepts, such as Distributed OS and Networked OS, enhance or limit the ability to meet the system goals. Include examples from real-world systems. <p>Assignment 2: Client-Server Model in Distributed System Architectures</p> <p>Task: Analyze the role of the client-server model in the context of distributed systems and its implementation across hardware and software layers.</p> <ol style="list-style-type: none"> 1. Deconstruct the client-server model, outlining its key components and communication processes. 2. Discuss how this model adapts to different hardware setups (multiprocessors, heterogeneous systems, and homogeneous systems).
--	--	--	--	---

					<p>3. Examine the software layers, comparing the implementation of client-server models in Distributed OS and Networked OS.</p> <p>Instructions:</p> <p>Develop a flow diagram that illustrates the communication between clients and servers in a distributed system, considering various hardware configurations.</p> <p>Write a detailed report (400–500 words) analyzing how the hardware and software configurations impact the efficiency, scalability, and fault tolerance of the client-server model. Include specific examples and case studies if possible.</p>
2	Operating System Issues	<p>Layered Protocols, Remote Procedure Call, Message oriented communication.</p> <p>Distributed file systems - Name services, Domain name system, Directory and discovery services, Peer to peer systems, Napster file sharing system, Peer to peer middleware routing overlays – Clocks, Events and process states Clock Synchronization - Logical clocks Global states - Distributed debugging - Distributed mutual exclusion - Lamport's mutual exclusion algorithm, Token-based algorithms</p>	<p>International Academia: (https://ocw.mit.edu/course/s/6-824-distributed-computer-systems-engineering-spring-2006/pages/syllabus/) (https://online.stanford.edu/courses/cs244b-distributed-systems)</p> <p>Industry Mapping: SimGrid</p>	10	<p>Assignment 3: Investigating Synchronization and Debugging in Distributed Systems</p> <p>Objective: Explore synchronization issues and the application of global states in debugging distributed systems.</p> <p>Task Details:</p> <ol style="list-style-type: none"> 1. Examine the importance of clock synchronization in distributed systems, with a focus on logical clocks (e.g., Lamport clocks) and their role in ordering events. 2. Analyze the role of global states in distributed debugging, including their use in identifying deadlocks and inconsistencies.

				<p>3. Compare the efficiency of Lamport’s mutual exclusion algorithm and token-based algorithms in achieving distributed synchronization, identifying the ideal scenarios for their use.</p> <p>Instructions:</p> <ol style="list-style-type: none"> 1. Develop a sequence diagram or timeline demonstrating how logical clocks are used to order events in a distributed system. 2. Write a 500–600 word report explaining how global states are captured and applied in distributed debugging. Include examples of tools or techniques used in practice. 3. Compare Lamport’s and token-based mutual exclusion algorithms, evaluating their strengths, weaknesses, and real-world applicability. Support your analysis with practical examples. <p>Assignment 4: Evaluating Distributed File Systems and Name Services</p> <p>Objective: Analyze the structure and functionality of distributed file systems, emphasizing name resolution and discovery mechanisms.</p> <p>Task Details:</p> <ol style="list-style-type: none"> 1. Break down the architecture of distributed file systems, focusing on the functions of Name Services, the Domain Name System
--	--	--	--	--

				<p>(DNS), and Directory and Discovery Services.</p> <p>2. Compare centralized, decentralized, and peer-to-peer systems, including Napster's file-sharing system and modern peer-to-peer routing overlays.</p> <p>3. Examine the challenges of ensuring consistency and availability in distributed file systems.</p> <p>Instructions:</p> <p>1. Design a diagram that represents how a distributed file system operates, including the process of name resolution via DNS and discovery services.</p> <p>2. Write a 500-word analysis comparing Napster's traditional file-sharing system with modern peer-to-peer routing overlays. Discuss improvements in routing mechanisms, scalability, and fault tolerance over time.</p> <p>3. Use real-world examples to illustrate the significance of directory services and peer-to-peer routing systems in distributed file systems.</p>
--	--	--	--	--

3	Distributed Transaction Processing	<p>Transactions - Nested transactions - Locks - Optimistic concurrency control - Timestamp ordering - Flat and nested distributed transactions - Atomic commit protocols - Concurrency control in distributed transactions - Distributed deadlocks - Transaction recovery - Overview of replication, Distributed shared memory and Web services.</p>	<p>International Academia: (https://ocw.mit.edu/course/s/6-824-distributed-computer-systems-engineering-spring-2006/pages/syllabus/) (https://online.stanford.edu/courses/cs244b-distributed-systems)</p> <p>Industry Mapping: SimGrid</p>	10	<p>Assignment 5: Applying Concurrency Control Techniques in Distributed Transactions</p> <p>Objective: Use concurrency control techniques to ensure consistency and handle conflicts in distributed transactions.</p> <p>Task Details:</p> <ol style="list-style-type: none"> 1. Apply locks, optimistic concurrency control, and timestamp ordering to manage conflicts in a distributed transaction scenario. 2. Implement strategies to detect and resolve distributed deadlocks. 3. Use a given distributed transaction example to demonstrate recovery steps, including rollback and commit. <p>Instructions:</p> <ol style="list-style-type: none"> 1. Given a scenario where multiple distributed transactions access shared resources, outline the steps to implement each concurrency control technique. 2. Create a flowchart showing how to detect and resolve deadlocks in a distributed system. 3. Write a 300–400 word explanation of how the recovery process works in case of a system failure during transaction execution.
---	---	--	--	----	--

4	Termination Detection in Distributed System	Termination Detection in Distributed System; Message Ordering and Group Communication; Self-Stabilization; Case Study - Content Distribution Networks (CDNs)	<p>International Academia: (https://ocw.mit.edu/course/s/6-824-distributed-computer-systems-engineering-spring-2006/pages/syllabus/)</p> <p>(https://online.stanford.edu/courses/cs244b-distributed-systems)</p> <p>Industry Mapping: SimGrid</p>	6	<p><u>Assignment 6: Applying Distributed System Concepts to the Google File System (GFS)</u></p> <p>Objective: Explore how distributed system principles are applied in the Google File System (GFS).</p> <p>Task Details:</p> <ol style="list-style-type: none"> 1. Identify key distributed system principles (e.g., replication, fault tolerance, and consistency) implemented in GFS. 2. Apply knowledge of distributed file systems to describe how GFS ensures scalability and reliability. 3. Explain the role of chunk servers and master servers in GFS and how they handle failures. <p>Instructions:</p> <ol style="list-style-type: none"> 1. Analyze a given workload scenario (e.g., large-scale data processing) and describe how GFS handles file distribution and replication to maintain performance. 2. Write a 400-word report explaining the fault-tolerant mechanisms in GFS and how

					they align with distributed system principles. 3. Create a diagram to demonstrate the interaction between the master server, chunk servers, and clients in GFS.

Learning Outcomes of the course (i.e., statements on students' understanding and skills at the end of the course the student shall have):

Students will gain knowledge of computer graphics fundamentals, algorithms, transformations, 3D visualization, and shading, applying these skills to create and optimize graphical systems.

1. Understand graphics systems, raster scan conversion, and filling of basic geometric objects.
2. Apply 2D and 3D transformations to graphics objects.
3. Analyze viewing, clipping methods, and surface detection techniques.
4. Represent 3D objects using curves, shading, and color models.

Desirable/Advanced:

1. Ability to implement basic matrix programming.
2. Understanding of the fundamentals of image processing .

Syllabus	Mapping with Industry and International Academia	Contact Hours	Lab Assignment Mapping
Module 1: Introduction to Computer Graphics & Graphics Systems Overview of Computer Graphics Definition, representing pictures, visualization & image processing. RGB color model, direct coding, lookup table. Graphics Devices Storage tube graphics display, raster scan display, 3D viewing devices. Active & passive graphics devices; computer graphics software. Scan Conversion	International Academia: Industry Mapping: Hackerrank, TCS Codevita projects, GitHub platform. NetBeans and Eclipse IDE may be used.	10

Course Objective

1. Cognitive computing is an effort to develop algorithms that use AI and machine learning along with human interaction and feedback to help humans make choices/decisions
2. Cognitive computing presents an appealing new model or paradigm for application development.
3. To ingesting data from inside and outside the enterprise, and leveraging functionality to identify and evaluate patterns and complex relationships in large and sometimes unstructured datasets, such as natural language text in journals, books, and social media, or images and sounds.
4. Describe various case studies related to cognitive computing.

University of Engineering and Management
Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
University of Engineering & Management, Jaipur

Course Outcome

1. Understand applications in Cognitive Computing.
2. Understand Natural language processor role in Cognitive computing.
3. Learn future directions of Cognitive Computing.
4. Evaluate the process of taking a product to market.

Syllabus for B.Tech Admission Batch 2022

Subject Name: Data Communication

Credit: 3

Lecture Hours: 40

Subject Code: PECCS603F

Prerequisites: Mathematics, Analog and Digital Systems, Boolean Algebra

Relevant Links:

[Study Material](#)

[NPTEL](#)

[Coursera](#)

Course Objective:

Obj1: To learn the basic concepts of data communications.

Obj2: To understand the fundamental concepts of encoding techniques

Obj3: To familiarize with various multiplexing techniques

Obj4: To understand the importance of error correcting codes in data transmission

Course Outcome:

After completion of course, students would be able to:

CO 1: Understand the basic concepts of data encoding and data transmission.

CO2: Explain different Data link control techniques like, error detection, correction, flow control and error control.

CO3: Demonstrate different multiplexing schemes and their practical application.

CO4: Compare the performance of different switching techniques.

Module Number	Topic	Sub-Topic	Mapping with Industry and International Academia	Lecture Hour	Corresponding Problems
2	Transmission Media and Signal Encoding Techniques	Guided Transmission Media, Wireless Transmission, Wireless Propagation, Line-of-Sight Transmission. Digital Data Digital Signals, Digital Data Analog Signals, Analog Data Digital Signals, Analog Data Analog Signals.	<p>AICTE: https://www.aicte-india.org/education/model-syllabus</p> <p>Industry and International Academia Mapping: L-SIM LAN protocol analyzer and simulator software CISCO Packet Tracer</p>	10	Design a hybrid communication system that integrates both wired and wireless transmission media to provide reliable, high-speed data transfer across urban and rural environments. Specify the types of transmission media (e.g., fiber optics, coaxial cables, radio waves) and signal encoding techniques (e.g., Manchester encoding, QAM) you would use for different segments of the network. Explain how your system manages challenges such as noise, interference, and bandwidth limitations. Propose improvements to enhance data integrity, signal strength, and overall efficiency of the network in diverse conditions.

Module Number	Topic	Sub-Topic	Mapping with Industry and International Academia	Lecture Hour	Corresponding Problems
3	Digital Data Communication Techniques and Data Link Control	Asynchronous and Synchronous Transmission, Types of Errors, Error Detection, Error Correction, Line Configurations, Interfacing, Flow Control, Error Control, High-Level Data Link Control (HDLC).	<p>AICTE: https://www.aicte-india.org/education/model-syllabus</p> <p>Industry and International Academia Mapping: L-SIM LAN protocol analyzer and simulator software CISCO Packet Tracer</p>	8	Design a digital data communication system that integrates advanced error detection and correction techniques along with data link control mechanisms to ensure reliable data transmission over noisy channels. Specify the digital modulation schemes (e.g., ASK, PSK, FSK) and error-control methods (e.g., CRC, Hamming code, ARQ) used at different stages of transmission. Justify your selection of data link protocols (e.g., HDLC, PPP) and explain how your system manages flow control, error recovery, and synchronization. Propose enhancements to optimize performance for high-speed or bandwidth-constrained environments.

Module Number	Topic	Sub-Topic	Mapping with Industry and International Academia	Lecture Hour	Corresponding Problems
4	Multiplexing, Circuit Switching and Packet Switching Multiplexing	Frequency Division Multiplexing, Synchronous Time Division Multiplexing, Statistical Time Division Multiplexing, Switching Networks, Circuit-Switching Networks, Circuit-Switching Concepts, Control Signaling, Soft switch Architecture, Packet-Switching Principles, X.25, and Frame Relay.	<p>AICTE: https://www.aicte-india.org/education/model-syllabus</p> <p>Industry and International Academia Mapping: L-SIM LAN protocol analyzer and simulator software CISCO Packet Tracer</p>	8	Design a network communication system that integrates multiplexing techniques with both circuit switching and packet switching protocols. Evaluate the advantages and disadvantages of using this hybrid system for large-scale data transmission in terms of efficiency, reliability, and resource allocation. Provide a justification for the selection of multiplexing techniques (such as FDM, TDM, or WDM) in your design, considering the specific needs of the network, and propose how this system could adapt to fluctuating network traffic loads.

Module Number	Topic	Sub-Topic	Mapping with Industry and International Academia	Lecture Hour	Corresponding Problems
5	Asynchronous Transfer Model	<p>Protocol Architecture, ATM Logical Connections, ATM Cells, Transmission of ATM Cells, ATM Service Categories, ATM Adaptation Layer.</p> <p>Routing in Switched Networks Routing in Circuit-Switching Networks, Routing in Packet-Switching Networks, Least-Cost Algorithms.</p>	<p>AICTE: https://www.aicte-india.org/education/model-syllabus</p> <p>Industry and International Academia Mapping: L-SIM LAN protocol analyzer and simulator software CISCO Packet Tracer</p>	8	<p>Design a next-generation multimedia communication system that uses Asynchronous Transfer Mode (ATM) for data transmission. Evaluate the scalability and performance of ATM when integrating it with Quality of Service (QoS) mechanisms to handle voice, video, and data traffic in a converged network. Discuss how ATM's cell-switching method can be optimized to address the challenges of high-latency applications, while also ensuring efficient bandwidth utilization. Propose innovative strategies for adapting ATM's architecture to support future technologies, such as 5G networks and IoT devices, and justify your choices.</p>

Syllabus for B.Tech Admission Batch 2021

Subject Name: Big Data Analytics

Credit: 3

Lecture Hours: 36

Subject Code: PECCS603G

CO1: Basic concepts of different aspects of Big Data Analytics

CO2: To understand Big Data Ecosystem

CO3: To be familiar with a set of well-known analytical model for large scale data

CO4: To explore databases for unstructured large-scale data

CO5: To Visualize the dataset after analysis

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Chapter Mapping	Corresponding Lab Assignment
1	Introduction	Classification of Digital Data, Introduction to Big Data, Characteristics of Data, Evolution of Big Data, Definition of Big Data, Challenges with Big Data, What is Big Data?, Why Big Data?, Traditional Business Intelligence (BI) versus Big Data, What is Big Data Analytics?	<p><i>International Academia:</i> (https://web.stanford.edu/class/cs246/)</p> <p><i>AICTE-prescribed syllabus:</i> CTE Model Curriculum for</p> <p><i>Industry Mapping:</i> Big Data Analytics-Coursera</p>	4	T1: Chapter 1,2,3	<p>Revisiting Python for Data Processing:</p> <ul style="list-style-type: none"> • Python program to perform read and write operations on a file. • Python program to copy the contents of a file to another file. • Python program to count frequency of characters in a given file. • Python program to compute the number of characters, words and lines in a file.
2	Big Data Ecosystem	Hadoop: HDFS, MapReduce, YARN Spark: RDD, Deploying Spark Pig: Pig Latin, Data processing operator Hive: Hive QL, Querying Data SparkSQL HBase, Zookeeper Stream processing and Spark Streaming	<p><i>International Academia:</i> (https://web.stanford.edu/class/cs246/)</p> <p><i>AICTE-prescribed syllabus:</i> CTE Model Curriculum for</p> <p><i>Industry Mapping:</i> Big Data Analytics-Coursera</p>	10	T2: Chapter 2,3,4,6,7,20,21 T3:Chapter 4,5,7,8,10,12,13	<p>Deploying Hadoop and Spark for Large Scale Data:</p> <ul style="list-style-type: none"> • Install, configure and run Hadoop and HDFS as Pseudo Cluster • Install, configure and run Apache Spark and RDD as a Pseudo Cluster • Install, configure and run Hadoop and HDFS as a Physical Cluster (atleast 1 Master-2 Slave) • Install, configure and run Apache Spark

						<p>and RDD as a Physical Cluster (atleast 1 Master-2 Slave)</p> <ul style="list-style-type: none"> • Develop a MapReduce program to calculate the frequency of a given word in a given file • Develop a MapReduce program to implement Matrix Multiplication. • Install, configure and run Apache Hive
3	Analytics for Large Scale Data	Machine learning with Spark MLLib: Supervised Learning: SVM, Linear Regression, Logistic Regression Unsupervised Learning: K-Means, DBSCAN, Apriori Algorithm, Counting Frequent item sets in a Stream	<p>International Academia: (https://web.stanford.edu/class/cs246/)</p> <p>AICTE-prescribed syllabus: CTE Model Curriculum for</p> <p>Industry Mapping: Big Data Analytics-Coursera</p>	12	T1: Chapter 12	<p>Parallelizing Machine Learning Algorithm using Spark:</p> <ul style="list-style-type: none"> • Implementation of Clustering Algorithm using Apache Spark • Implementation of Supervised learning Algorithm using Apache Spark
4	Databases for Large Scale Data	NoSQL, MongoDB, Cassandra	<p>International Academia: (https://web.stanford.edu/class/cs246/)</p> <p>AICTE-prescribed syllabus: CTE Model Curriculum for</p> <p>Industry Mapping: Big Data Analytics-Coursera</p>	6	T1: Chapter 4,6,7	<p>Working with Databases for Large Scale Data:</p> <ul style="list-style-type: none"> • Implement an application that stores big data in MongoDB / Pig using Hadoop • Implement NoSQL Database Operations: CRUD operations, Arrays using MongoDB • Implement

						<p>Functions: Count – Sort – Limit – Skip – Aggregate using MongoDB</p> <ul style="list-style-type: none"> • Install and configure MongoDB/ Cassandra/ HBase to execute NoSQL Commands
5	Visualization of Datasets	<p>Visualizations: Visual Data Analysis Techniques, Interaction Techniques; Systems and Analytics Applications, Analytics using Statistical packages, Industry challenges and application of Analytics</p>	<p>International Academia: (https://web.stanford.edu/class/cs246/)</p> <p>AICTE-prescribed syllabus: CTE Model Curriculum for</p> <p>Industry Mapping: Big Data Analytics-Coursera</p>	4		<p>Visualizing Data:</p> <ul style="list-style-type: none"> • Visualize data using basic plotting techniques in Python

Syllabus for B.Tech Admission Batch 2022

Subject Name: E-Commerce

Credit: 3

Subject Code: PECCS603I

Course Outcome:

- 1) The students will get an understanding of the key terminologies of E-Commerce
- 2) The students will understand the architecture and security protocols used in E-Commerce
- 3) The students will grasp the concepts of consumer-oriented E-Commerce applications and payment systems
- 4) The students will comprehend electronic data interchange standards and issues, and e-marketing techniques and will be able to build their E-Commerce application.

Module number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture hour	Corresponding Practical (Hands-On) Questions
