Subject Name: Mathematics-IV

Subject Code: BSM401

Credit: 3

Lecture Hours: 36

CO	Course Outcomes
CO1	Identify different tools for differentiation and integration of functions of a complex variable that are used with various other techniques for solving engineering problems.
CO2	Appraise the notions of Fourier Series and Transform to solve advanced engineering problems.
CO3	Apprehend the concept of Laplace Transform together with its applications in evaluating integrals and solving ordinary differential equations.
CO4	Relate the use of Z-Transform for discrete functions and solve difference equations using Z-Transform technique.

Detail syllabus

Mod ule No.	Topic	Sub-topics	Mapping with Industry and International Academia	Mapping with Text book	Lecture Hours	Corresponding Lab Assignment
1	Calculus of Complex Functions	Complex function, Limit, Continuity and Differentiation; Analytic functions, Cauchy-Riemann equations (statement only); Harmonic functions, Harmonic Conjugate; construction of Analytic functions (exponential, trigonometric, logarithm) and their properties.	<i>International Academia:</i> erp.iitkgp.ac.in https://syllabus.stanford.edu/syllabus/#/mainSyllabus/MATH117 <i>AICTE-prescribed syllabus:</i> https://www.aicte-india.org/sites/default/files/ModelCurriculum/Final_ECE/EE/EEE/ME/BSC104/pg43.pdf <i>Industry Mapping:</i> Analysis of AC circuit, physical problems involving ideal fluid flow, steady state heat and current flow can be solved using the theory.	Text book Chapter 19 & Chapter 20	8	Associated Lab using MATLAB: 1.Evaluation of contour integrals using MATLAB 2.Calculation of residues at the poles using MATLAB

Subject Name: Fluid Mechanics & Fluid Machines

Subject Code: PCCME401

Credit: 4

Lecture Hours: 48

Prerequisite: No

Relevant link: [STUDY MATERIALS](#) [NPTEL](#) [COURSERA](#)

Course Objective(s):

The purpose of learning of this course is to:

1. To learn about the application of mass and momentum conservation laws for fluid flows
2. To understand the importance of dimensional analysis
3. To obtain the velocity and pressure variations in various types of simple flows
4. To analyze the flow in water pumps and turbines.

Module No.	Topic	Sub-topics	Mapping with Industry and International Academia	Mapping with Textbook & Chapter	Lecture Hours	Corresponding Lab Assignments
1	Basic Concepts and Properties of Fluid	definition, distinction between solid and fluid - Modules and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapor pressure, capillary, and surface tension. Fluid statics concept of fluid static pressure, absolute and gauge pressures – pressure measurements by manometers and pressure gauges. Hydrostatic forces on submerged surfaces, Stability of floating bodies.	<p>International Academia: (https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)</p> <p>AICTE-prescribed syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>Industry Mapping: CFD, Open FOAM Software, ANSYS</p>	Text Book, RK Bansal, Chap – 1,2,3,4	10	1.To explore the principles of fluid mechanics, including Stokes’ law, Bernoulli’s theorem, and hydraulic coefficients, and apply them to real-world scenarios using analytical, computational, and AI-based approaches.
	Fluid	Fluid Kinematics - Flow visualization	International Academia:	Text Book, RK Bansal		Designing and Analyzing Flow

2	Kinematics and Fluid Dynamics	<p>- lines of flow - types of flow - velocity field and acceleration - continuity equation (one- and three-dimensional differential forms)- Equation of streamline - stream function - velocity potential function - circulation - flow net. Fluid dynamics - equations of motion - Euler's equation along a streamline - Bernoulli's equation, applications - Venturi meter, Orifice meter, Pitot tube. Dimensional analysis - Buckingham's Pi theorem- applications - similarity laws and models.</p>	<p>(https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)</p> <p>AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/M Model Curriculum/Final Mechanical%20 Engg.pdf)</p> <p>Industry Mapping: CFD, Open FOAM Software, ANSYS</p>	Chap – 5, 6, 12	10	Through Notches Using AI Tools
3	Incompressible Fluid Flow- Viscous flow	<p>Navier - Stoke's equation (Statement only) - Shear stress, pressure gradient relationship - laminar flow between parallel plates - Laminar flow through circular tubes. (Hagen Poiseuille's equation). Hydraulic and energy gradient - flow through pipes - Darcy - Weisback's equation – pipe roughness -friction factor- Moody's diagram- minor losses - flow through pipes in series and in parallel - power transmission. Boundary layer flows, boundary layer thickness and boundary layer separation. Drag and lift coefficients</p>	<p>International Academia: (https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)</p> <p>AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/M Model Curriculum/Final Mechanical%20 Engg.pdf)</p> <p>Industry Mapping: CFD, Open FOAM Software, ANSYS</p>	Text Book, RK Bansal Chap – 9, 10, 11, 12,13	8	Analyzing Friction in Pipes Using Reynolds Apparatus with AI/GenAI
	Rotody	<u>Euler's equation</u> – theory of Roto	International Academia:	Text Book,		Assignment:

4	dynamic machines - Pumps	dynamic machines – various losses and efficiencies. <u>Centrifugal pumps</u> - working principle, work done by the impeller, velocity triangle at the entry and exit, specific speed, multi-staging, NPSH, cavitation in pumps, performance curves. <u>Reciprocating pump</u> – working principle, indicator diagram and air vessel.	(https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/) AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf) Industry Mapping: CFD, Open FOAM Software, ANSYS	<i>RK Bansal Chap – 17, 19, 20</i>	10	Performance Characteristics of a Centrifugal Pump Using AI/GenAI. 1. Cavitation phenomena in centrifugal pump. 2. Centrifugal Pump Experiment (Series and parallel operation)
5	Water Turbine	Classification, working principle, heads and efficiencies, velocity triangles- Axial, radial and mixed flow turbines- Pelton wheel, Francis turbine and Kaplan turbines, draft tube, Specific speed, unit Quantities, performance curves for turbines – governing of turbines.	International Academia: (https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/) AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf) Industry Mapping: CFD, Open FOAM Software, ANSYS	<i>Text Book, RK Bansal Chap - 18</i>	10	Assignment: Enhancing Water Turbine Design and Analysis Using AI and Generative AI
		<u>Total</u>			48	

Course Outcomes (s) (COs):

After completion of this course, the learner will be able to

1. Upon completion of this course, students will be able to analyze simple flow situations mathematically
2. They will be able to evaluate the performance of pumps and turbines.
3. Analyse the model and the prototype.
4. Find the dependent and independent parameters for a model of fluid flow.

Text Book:

1. Introduction to Fluid Mechanics and Hydraulic Machines, Dr. R.K.Bansal, Laxmi Publication. (Chap-1,2,3,4,5,6,9,10, 11,12,17,18,19,20)
2. A Text book of Fluid Mechanics and Hydraulic Machines, Dr. R.K.Rajput, S Chand Publishing

Reference Books

1. Introduction to Fluid Mechanics & Fluid Machines, Som and Biswas, TMH.
2. A Textbook on Fluid Mechanics and Machines, S.Pati, McGrawHill.
3. Fluid Mechanics and Machinery, C.S.P.Ojha, R. Berndtsson and P. N. Chadramouli, Oxford University Press, 2010.
4. Hydraulics and Fluid Mechanics, P M Modi and S M Seth, Standard BookHouse.

CO4	2	2	2	3	2	1	1	-	-	1	1	2

Subject Name: Fluid Mechanics & Fluid Machines Lab

Subject Code: PCCME491

Credit: 1

Lecture Hours: 24

Objectives:

1. To understand the principles and performance characteristics and application of flow devices.
2. To know about the measurement of the fluid properties
3. To understand about rotodynamic machines

Contents

Details of Experiments	Industry Application	Mapping	Software
1. Pressure measurement instrument used in many i.e HVAC industry as Digital manometer	It detects gas leaks as well as faults in air conditioning systems. Other uses include maintenance of HVAC systems, monitoring gas pressure in piping and compressor systems, measuring fluid flow and blood pressure, etc.	International Academia: (https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)	Quick analyser is a powerful software that allows to connect any PC in an easy and efficient way to all AEP transducers instrumentations with serial or USB
2. Total energy of fluid at a given section remains constant, validated through Bernoulli's Apparatus.	It is useful in 1) Dynamic lift of aeroplane. 2) Hydraulic press. the flow of water through small places like pipes, the way blood moves in our bodies, and how car carburetor's function. Some applications of Bernoulli's equation include Bunsen burners, flow sensors, ejectors, carburetors, aircraft wings, and spoilers on cars.	(https://ocw.mit.edu/courses/2-672-project-laboratory-spring-2009/pages/syllabus/) AICTE-prescribed syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf)	Cadence's Fidelity and Fidelity Pointwise: CFD simulation tools use numerical methods to solve the equations governing fluid flow, to analyze flow behavior, calculate energy and flow rate
3. Viscosity of any fluid measured through Stoke's Law Apparatus	Applications of Stokes' law, such as testing the viscosities of fluid,		Interactive simulation of Stokes' law: An open-source interactive simulation of Stokes' Law is available on Stoke's Law is used to determine the terminal velocity of any object. This law also works in explaining the working of parachutes. Autodesk hydraulic modeling software CFD software can be used to analyze and design venturimeters for industrial application.

<p>4. Finding different flow ratios used in model analysis in the form of hydraulic coefficients.</p> <p>5. Controlling fluid flow through V notch and of Rectangular notches in dam.</p> <p>6. Measuring fluid flow in piping industry through Venturimeter Apparatus</p> <p>7. Industries using different softwares for laminar or turbulent flow measured by Reynolt's apparatus.</p> <p>8. One of the major parameters which lead to major loss in manufacturing sector is Friction In pipes</p> <p>9. Performance characteristic, Cavitation</p>	<p>studying fog and rain, and industrial applications, such as separating particulates from drilling mud and separating oil from wastewater.</p> <p>Estimating model parameters to minimize the difference between model results and actual observations.</p> <p>To measure seepage of water through, around or under a dam in earth as well as concrete dams.</p> <p>Measuring, controlling, monitoring airflow, measuring sewage discharge in pipes of water treatment plant, refinery etc</p> <p>The Reynolds number is a fundamental parameter used in many industrial software applications, including: CFD, System design, HVAC etc. It identifies the type of flow.</p> <p>Designing and optimizing hydraulic systems, calculating pressure drop, Calculating flow rate etc.</p> <p>Industrial applications: Water</p>	<p>)</p> <p>Industry Mapping: CFD, Open FOAM Software, ANSYS</p> <p>(https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)</p> <p>(https://ocw.mit.edu/courses/2-672-project-laboratory-spring-2009/pages/syllabus/)</p> <p>(https://ocw.mit.edu/courses/2-25-advanced-fluid-mechanics-fall-2013/pages/syllabus/)</p> <p>(https://ocw.mit.edu/courses/2-672-project-laboratory-spring-2009/pages/syllabus/)</p>	<p>CFD software is used in industrial applications of the Reynolds apparatus to simulate fluid flow and heat transfer through Ansys fluent, Ansys CFX, Omnis, Pointwise.</p> <p>AioFlo calculates pipe sizes (diameter), fluid flow rates and pressure drops for compressible and incompressible fluids. AFT Fathom is used to calculate pressure drop and flow distribution in liquid and low-velocity gas piping and ducting systems. I Edibon Computer Controlled Fluid Friction in Pipes, with Hydraulics Bench AFTC is designed to determine the friction coefficient in pipes</p> <p>Many software options for piping design Bentley: comprehensive piping and vessel design and analysis software AutoPIPE: comprehensive piping and vessel design and analysis software, CADWorx: a powerful and versatile solution that redefines plant design and automation.</p> <p>CAESES, CFD for pump system design. cosmetic, agriculture, wine-making, dairy, mining, petroleum, food-processing, chemical, power</p>
---	---	---	---

phenomena, multi-staging of Centrifugal Pump Experiment. 10. Study of Pelton Turbine	treatment, Oil refineries, Dairy: etc. Wastewater treatment, Hydroelectric power generation, Water supply and irrigation, Marine propulsion		RITAL, CFturbo, software can be used to design axial, radial and mixed-flow pumps, fans, blowers, compressors, and turbines, as well as for diffusers, Ansys
---	--	--	--

Course Outcome

1. Understand hands on experience in flow measurements using different devices.
2. Understand the working principle and performance of centrifugal pump and Turbine.
3. Know, how to calculate and draw characteristics curves for various experiments related to fluid mechanics.
4. Understand the energy flow pattern through the hydraulic turbines and pumps.

Text Book:

1. Introduction to Fluid Mechanics and Hydraulic Machines, Dr. R.K.Bansal, LaxmiPublication.

		diagrams; Uniform velocity, parabolic, simple harmonic and cycloidal motions; Derivatives of follower motions; Circular and tangent cams; Pressure angle and undercutting; Graphical and analytical disc cam profile synthesis for roller and flat face followers.		<p>pdf</p> <p>International Standards: https://ocw.mit.edu/courses/8-01sc-classical-mechanics-fall-2016/pages/week-12-rotations-and-translation-rolling/#Deep_Dive</p> <p>Industry Mapping:</p> <ol style="list-style-type: none"> 1. Physical inspection of cam-follower mechanisms in machines 2. Hexagon ADAMS Simulation 3. SOLIDWORKS motion analysis 	and conjugate action under various load conditions.
6	Gears	Involute profiles; gear parameters; Fundamental law of gearing and conjugate action, Force analysis Spur gear, helical gear; Epicyclic and regular gear train kinematics	Theory of machine, S S Rattan, Chapters 10, 11	<p>National Standards: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standards: https://ocw.mit.edu/courses/2-003sc-engineering-dynamics-fall-2011/pages/mechanical-vibration/</p> <p>Industry Mapping: Hexagon ADAMS Simulation</p>	6 and output the corresponding motion paths and kinematic results, enabling black-box type analysis.

Course Outcomes:

After completing this course, the students should be able to -

1. Comprehend the kinematics and rigid-body dynamics of machine components driven by kinematic inputs, focusing on their motion behavior.
2. Analyze the motion of interconnected mechanisms by determining the displacement, velocity, and acceleration of any point on a rigid link.
3. Design and develop linkage mechanisms and cam systems to achieve desired output motion, based on specified design criteria.

- Master the kinematics of gear trains, understanding their operation and behavior in various configurations.

COURSE OBJECTIVES:

1. To acquire knowledge about the IC engine cycles, classification, and working principles and to measure performance parameters along with the heat balance sheet.
2. To provide complete knowledge of combustion phenomena in IC Engines, the type of fuels used, and the fuel supply systems.
3. To explain the effects of exhaust emissions on human health, the environment, and various pollution norms.
4. To explain the Gas Turbine with various operating cycles (ideal and real).

Module No	Topic	Sub-topics	Textbook & Chapter No.	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment
1	Introduction	Internal and external combustion engines, classification and nomenclature of I.C. Engines, air standard Otto, Diesel and Dual combustion cycles, deviation of actual engine cycle from ideal cycle, fuel air cycle analysis, real cycles, valve timing diagram.	I.C. Engines, V. Ganesan, Chapter 1, 2 and 3	International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/) AICTE-prescribed syllabus/IIT Syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf) / (https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf) Industry Mapping: SolidWorks/ ANSYS/ MATLAB	6	1. Disassembly and assembly of Engine Model. 2. Modeling an Engine using Matlab 3. IC Engine valve motion

						analysis using SolidWorks
2	Carburetors & Fuel Injection	Mixture requirements for various operating conditions in S.I. Engines, elementary carburetor, single-point and multi-point fuel injection systems, diesel injection system, calculation of air-fuel ratio for a simple carburetor, electronic fuel injection in S.I. engine, requirements of diesel injection system, types of injection systems - port fuel injection, direct injection, common rail injection, gasoline direct injection system, fuel pumps, Variable Valve Technology.	I.C. Engines, V. Ganesan, Chapter 7, 8 and 9	<p>International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/)</p> <p>AICTE-prescribed syllabus/IIT Syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf) / (https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)</p> <p>Industry Mapping: SolidWorks/ ANSYS/ MATLAB</p>	6	<ol style="list-style-type: none"> 1. Study of MPFI (multipoint fuel injection) system. 2. Study of valve timing diagram of diesel engine. 3. Analysis of fuel injector using ANSYS
3	Ignition systems	Types of ignition systems - Battery and Magneto ignition system, electronic ignition system, ignition timing, spark plugs, spark advance, ignition delay.	I.C. Engines, V. Ganesan, Chapter 10	<p>International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/)</p> <p>AICTE-prescribed syllabus/IIT Syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf) / (https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)</p>	3	<ol style="list-style-type: none"> 1. Modeling engine timing using triggered subsystems

				pdf)		
				Industry Mapping: SolidWorks/ ANSYS/ MATLAB		
4	Combustion in I.C. Engines	Stages of combustion in S.I. & CI Engines, factors influencing the combustion phenomenon, combustion chambers and abnormal combustion - detonation and knocking, influence of engine variables on detonation, pre-ignition, delay period, variables affecting delay period, lubrication and cooling systems.	I.C. Engines, V. Ganesan, Chapter 11, 12 and 13	<p>International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/)</p> <p>AICTE-prescribed syllabus/IIT Syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf / https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)</p> <p>Industry Mapping: SolidWorks/ ANSYS/ MATLAB</p>	5	<ol style="list-style-type: none"> 1. Comprehensive IC engine flow & combustion simulation using ANSYS 2. Modeling an engine cooling system using MATLAB
5	Engine Testing and Performance	Measurement of various engine performance parameters, heat balance, Morse tests.	I.C. Engines, V. Ganesan, Chapter 15 and 16	<p>International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/)</p> <p>AICTE-prescribed syllabus/IIT Syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf / https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)</p> <p>Industry Mapping: ANSYS/ MATLAB</p>	4	<ol style="list-style-type: none"> 1. Ganesan, Chapter 18	2017/pages/calendar/ AICTE-prescribed syllabus/IIT Syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf) / (https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)) Industry Mapping: ANSYS/ MATLAB		(CFD) analysis of turbocharger 2. Computational fluid dynamics (CFD) analysis of supercharger
7	Emissions & Alternate Fuels for IC Engines	Fuels and rating of fuels for internal combustion engine. Engine emission and control, NOx formation, carbon monoxide and unburned hydrocarbon emissions, particulate emissions, exhaust gas treatment, catalytic converters, emission standards. Basic overview of alternative fuels, environmental pollution from vehicles, its measurement and control, biogas and hydrogen in engines.	I.C. Engines, V. Ganesan, Chapter 6 and 14	International Standard: (https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/calendar/) AICTE-prescribed syllabus/NIT Syllabus: (https://www.aicte-india.org/sites/default/files/Model_Curriculum/UG-1/ug-vol1.pdf) / (https://website.nitrkl.ac.in/Academics/AcademicDepartments/SyllabiDetails.aspx?d=TUU6TWVjaGFuaWNhbCBFbmdpbmVlcmluZw==&di=MTY=-/NBtEwG4h0k=&c=TWVjaGFuaWNhbCBFbmdpbmVlcmluZyAoQi5UZWNNoLiAtIDR5cnMp-ZQC9+Ctqefk=&t=VUc=-/CGGPdtUIIU=&s=NzA2Ng%3d%3d-9pPKosm5Tm8%3d) Industry Mapping: ANSYS/ MATLAB	3	1. Experimental study of exhaust gases of an IC engine. 2. Use of catalytic converters and their effect on flue gas of an I.C. Engine. 3. Determination of calorific value of a fuel by Bomb calorimeter.
8	Gas Turbines	Brayton cycle, open and closed gas turbine plants, improvements of the basic gas turbine cycle, reheating and regeneration, applications of gas	Gas Turbines, V. Ganesan, Chapter 4 and 5	International Standard: (https://ocw.mit.edu/courses/2-60j-fundamentals-of-advanced-energy-conversion-spring-2020/resources/mit2_60s20_lec15/) AICTE-prescribed syllabus/NIT Syllabus:	6	1. Performing calculation of a gas turbine thermodynamic cycle using MATLAB

		turbines, requirements of a gas turbine.		(https://people.iitism.ac.in/~academics/assets/course_structure/new/cat/mech/MEC307.pdf)		
				Industry Mapping: SolidWorks/ANSYS/MATLAB		

COURSE OUTCOMES:

CO1: To explain the operating characteristics and thermodynamic analysis of common internal combustion engine cycles.

CO2: To understand about the combustion phenomenon of SI and CI engines, engine emissions and exhaust treatment models.

CO3: To assess the performance of IC engines, efficiency enhancement methods and the importance of alternate fuels.

CO4: To identify the essential components of gas turbines along with their performance-improving methods.

TEXT BOOKS:

1. [V. Ganesan, I.C. Engines, McGraw Hill, 2017.](#) (Chapters – 1,2,3,6,7,8,9,10,11,12,13,14,15,16,18)
2. [V. Ganesan, Gas Turbines, McGraw Hill, 2004.](#) (Chapters – 4,5)

REFERENCE BOOKS:

Subject Name: Mechanical Engg Lab IIIB (IC Engine)

Subject Code: PCCME492

Credit:1

Lecture Hours: 24

Prerequisites: Engineering Thermodynamics

COURSE OBJECTIVES:

1. To understand the function and different components of an I.C. Engine.
2. To know about the fundamentals of I.C. Engines operations and their performance characteristics, efficiency, fuel requirements, and environmental impact.

COURSE CONTENT:

Experiments	Mapping with Industry and International Academia	Corresponding Lab Assignment
1. Disassembly and assembly of a working 4-stroke 3-cylinder SI Engine and finding faults for maintenance work.	<p>AICTE prescribed syllabus: https://www.aicte-india.org/sites/default/files/Mo-del_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>International Standards: https://ocw.mit.edu/courses/2-61-internal-combustion-engines-spring-2017/pages/labs/</p> <p>Industry Mapping: SolidWorks, ANSYS, MATLAB</p>	Create a mathematical model of a 4-stroke S.I. Engine in MATLAB.
2. Analysis of the MPFI (multipoint fuel injection) system and developing an Arduino based injection control module with optimized code and testing of the same.		Analyse the heat and fluid flow of the fuel through a fuel injector using ANSYS.
3. Performance Testing of a 4- stroke 4-cylinder SI Engine using an Eddy Current Dynamometer: Analysis of brake power, efficiencies, and fuel consumption to formulate the heat balance sheet to understand the engine’s performance under different fuel blend condition.		Using SolidWorks, analyse the valve motion for the inlet and outlet valves of a diesel engine.
4. Experimental analysis of exhaust gases from an Internal Combustion Engine and findings the emission characteristics and environmental impact with different blending of biodiesel/ethanol and modifying the catalytic converters.		Calculate the efficiency of a 2-stroke IC Engine using MATLAB Simulink.
		Make a model of the exhaust system of a 4-stroke S.I. engine and analyse the heat release from the system in ANSYS using transient conditions.

		Conduct a CFD analysis of the flow rate and heat transfer involved with the flow of flue gases from the exhaust pipe of an automobile in ANSYS.
5. Determination of Calorific Value of solid/liquid fuels as per ASTM standards using a microprocessor based automated bomb calorimeter: Energy Analysis to study the direct influence of a fuel's calorific value on engine performance and efficiency.		Model the heat release and temperature distribution during the combustion of a fuel inside a bomb calorimeter using ANSYS.
Mini Project: Create a MATLAB script titled "ICEPerformanceSimulator.m" that simulates the performance of a 4-stroke S. I. engine that uses input parameters like engine displacement, compression ratio, fuel type, and operating conditions (load, R.P.M.), and the script calculates key outputs like power, torque, specific fuel consumption and thermal efficiency. The tool should also help visualize the performance curves of the engine.		

COURSE OUTCOMES:

- CO1:** Study the working of different engine terminology and different components of I.C. Engines.
- CO2:** Understand the various losses, stages of combustion and performance parameters in I.C. Engines.
- CO3:** Apply knowledge of thermodynamics and measure performance characteristics of I.C. Engines.
- CO4:** Evaluation of engines emission and their effect on environment.

CO4	2	2	2	3	2	2	2	1	1	1	1	2

Subject Name: Measurements & Metrology

Subject Code: PCCME404

Credit: 3

Lecture Hours: 36

Pre-requisite: Physics

Relevant Link: [STUDY MATERIAL](#)

NPTEL ([1](#) & [2](#))

Coursera ([1](#), [2](#))

Objectives:

1. To discuss suitable methods and devices for dimensional, geometrical, and surface roughness measurements, and designing the limit gauges.
2. To interpret the characteristics of measuring instruments and apply suitable methods of measurement for physical quantities such as force, pressure, temperature, velocity, torque, vibration, etc.
3. To identify and estimate measurement errors and suggest suitable techniques to minimize them.
4. To identify the techniques for the quality assurance of the products and the optimality of the process in terms of resources and time management.

Subject Name: Mechanical Engg Lab IIB (Measurements & Metrology)

Subject Code: PCCME493

Credit: 1

Lecture Hours: 24

Pre-requisite: No

Objectives:

1. To understand the proper use and maintenance of important instruments, such as Vernier callipers, autocollimators, slip gauges, and pyrometers
2. To identify the techniques for the quality assurance of the products and the optimality of the process in terms of resources and time management.
3. To experiment with measuring equipment used for linear and angular measurements.
4. To find common types of errors in measurement equipment.
5. To experiment with different types of sensors, transducers, and strain gauges equipment.
6. To make use of thermocouples for measurement of temperature.

Course Content:

It should include about 14 experiments as outlined below:

Module number	Topic & Sub-topics	Mapping with Industry and International Academia	Corresponding Lab Assignment
	<ol style="list-style-type: none">1. Use of straight edge and spirit level in finding the flatness of surface plate. Ensuring flatness of jigs, fixtures, and machine bases for precision machining.2. Measurement of linear, angles, tapered objects using comparator, bevel vernier protractor, and Sine Bar, respectively. Inspecting any machine parts to ensure precision and adherence to design specifications.3. Measurement of threads using two-wire/three-wire method assuring	<p>International Academia: https://mitocw.ups.edu.ec/courses/biological-engineering/20-309-biological-engineering-ii-instrumentation-and-measurement-fall-2006/</p> <p>AICTE-prescribed</p>	Develop a MATLAB Simulation and Analysis Tool for Measuring Surface Flatness Using Straight Edge and Spirit Level: Ensuring Precision in Jigs, Fixtures, and Machine Bases

<p>quality in the production of fasteners, threaded shafts, and screws for industries, ensuring proper fit and strength.</p> <ol style="list-style-type: none"> 4. Use gear teeth Vernier calipers and check the Gear tooth thickness and chordal addendum of spur gear. Inspection and validation of gear dimensions in the production of automotive transmissions, industrial gearboxes, and heavy machinery to ensure smooth operation and durability. 5. Use profile projector/ tool makers microscope to inspect small and complex components such as cutting tools, and micro-electronic parts, ensuring they meet precise tolerances. 6. Measurement of bore diameter using micrometer and gauges (Bore gauge/ telescopic gauge). Validating bore dimensions of engine cylinders, pistons, or pumps during the production process to ensure fit and functionality. 7. Practicing different gauges to assess angles, thread, internal and external radius, etc. Check quality of sheet metal products/ turbine blades/ engine parts to verify dimensional accuracy. 8. Measurement of surface roughness by Talysurf instrument. Ensuring the required surface finish for parts like bearings/ seals, where surface quality impacts performance and longevity. 9. Statistical process control system to apply to measured dimension of samples to monitor dimensional consistency to reduce defects and improve process capability. 10. Calibration of transducer or thermocouple for temperature measurement ensure accurate temperature control in manufacturing processes such as 	<p>syllabus: https://www.aicte-india.org/sites/default/files/Model_Curriculum/Final_Mechanical%20Engg.pdf</p> <p>Industry Mapping: imageJ software, SolidWorks Inspection Taylor Hobson TalyMap MATLAB, Labview, PLC Design expert, Minitab, Statpro</p>	<p>Taylor Hobson TalyMap Software for analyzing roughness and texture of bearing materials and check with catalog. University of Engineering and Management

Institute of Engineering & Management, Salt Lake Campus
Institute of Engineering & Management, New Town Campus
Institute of Engineering & Management, Jaipur

Subject Name: Data Structure & Algorithms

Credit: 1

Subject Code: ESCME481

Lecture Hours: 24

Pre-requisite: Basic knowledge of computer fundamentals, programming in C/C++, logical and mathematical reasoning, and a basic understanding of algorithms and problem-solving concepts.

Objectives:

To develop the ability to efficiently organize, manage, and process data using appropriate data structures and algorithms through programming.

Contents

Module & Topic	Sub-topics	Mapping with Industry and International Academia
Module I: Introduction	Definition of Data Structure, Classification of Data Structures, Operations on Data Structures. Algorithm: Definition, Time Complexity, Space Complexity Arrays, Strings, Pointers and Structures	NPTEL https://nptel.ac.in/courses/106102064 Linkedin https://www.linkedin.com/learning/programming-foundations-data-structures-25191158 https://www.linkedin.com/learning/python-data-structures-and-algorithms Coursera https://www.coursera.org/specializations/data-structures-algorithms

<p>Module II: Linear Data Structure</p>	<p>Singly Linked List: Traversal, Searching, Insertion, and Deletion. Circular Linked List: Insertion, and Deletion. Doubly</p> <p>Linked List: Insertion, and Deletion. Circular Doubly Linked List: Insertion, and Deletion. Stack: Array Representation,</p> <p>Operations on a Stack (Push, Pop), Linked Representation of Stack, Operations on a Linked Stack. Applications of Stack:</p> <p>Evaluation of Arithmetic Expressions, Recursion: Factorial computation, Tower of Hanoi, etc. Queue: Array</p> <p>Representation, Linked Representation, Circular Queue, Deque, Priority Queues.</p>	<p>NPTEL https://nptel.ac.in/courses/106102064</p> <p>Linkedin https://www.linkedin.com/learning/programming-foundations-data-structures-25191158</p> <p>Coursera https://www.coursera.org/specializations/data-structures-algorithms</p>
<p>Module III: Nonlinear Data Structure</p>	<p>Tree: Binary Tree, Binary Search Tree, Creating a Binary Tree from a General Tree. Traversing a Binary Tree: Pre-order,</p> <p>In-order and Post-order Traversal, Huffman's Tree and Application. Searching Techniques: Linear Search, Binary Search.</p> <p>Operations on Binary Search Tree: Searching, Insertion, and Deletion. Determining the Height of a Binary Search Tree,</p> <p>Search the Smallest Node in a Binary Search Tree, Search the Largest Node in a Binary Search</p>	<p>NPTEL https://nptel.ac.in/courses/106102064</p> <p>Linkedin https://www.linkedin.com/learning/programming-foundations-data-structures-25191158 https://www.linkedin.com/learning/python-data-structures-and-algorithms</p> <p>Coursera https://www.coursera.org/specializations/data-structures-algorithms</p>

	<p>Tree, Threaded Binary</p> <p>Tree. AVL Tree, Operations on AVL Tree, Searching for a Node in an AVL Tree. Binary Heap: Insertion, and Deletion, Binomial Heap, Fibonacci Heap</p>	
Module IV: Sorting	<p>Bubble Sort, Insertion Sort, Selection Sort, Merge Sort, Quick Sort, and Heap Sort.</p>	<p>NPTEL https://nptel.ac.in/courses/106102064</p> <p>Linkedin https://www.linkedin.com/learning/programming-foundations-data-structures-25191158 https://www.linkedin.com/learning/python-data-structures-and-algorithms</p> <p>Coursera https://www.coursera.org/specializations/data-structures-algorithms</p>
Module V: Graph	<p>Directed Graph and Undirected Graph, Representation of Graph: Adjacency Matrix, Adjacency List. Graph Traversal:</p> <p>Breadth-First Search and Depth-first Search, Topological Sorting, Shortest Path Algorithms: Minimum Spanning Tree (Prim's Algorithm, and Kruskal's Algorithm)</p>	<p>NPTEL https://nptel.ac.in/courses/106102064</p> <p>Linkedin https://www.linkedin.com/learning/programming-foundations-data-structures-25191158 https://www.linkedin.com/learning/python-data-structures-and-algorithms</p> <p>Coursera https://www.coursera.org/specializations/data-structures-algorithms</p>

Text Books:

1. Seymour Lipschutz, Data Structures. Mc-Graw Hill Education..

Reference Books:

2. Yedidyah Langsam, Moshe J. Augenstein, Aaron M. Tenenbaum, Data Structures Using C and C++. Pearson, 2nd Edition, 1996.
3. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, Fundamentals of Data Structures in C. University Press.
4. Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, Introduction to Algorithms. Prentice Hall of India, 3rd ed., 2009

Course Outcomes:

At the end of this course students will demonstrate the ability to

1. Understand the fundamentals of data structures and algorithms, their classifications, operations, and performance analysis using arrays, strings, pointers, and structures.
2. Implement various linked lists, stacks, and queues with their operations and applications in solving computational problems.
3. Analyze various tree data structures and searching techniques, focusing on their operations, traversals, and applications for efficient data organization and retrieval.
4. Distinguish various sorting techniques for efficient data arrangement and algorithm performance comparison.
5. Explain graph representations and apply graph traversal and shortest path algorithms for solving network and connectivity problems efficiently.

Lecture Hours: 24

[Study Material](#)

[LinkedIn](#)

[NPTEL](#)

[Coursera](#)

Course Outcomes:

The concepts developed in this course will help the students in their higher studies. The course will enable the student to

CO1: Understand fundamental concepts of environmental systems, sustainability, United Nations Sustainable Development Goals (UNSDGs) and their interrelationship with human society.

CO2: Apply knowledge of sustainable practices, different technical tools and existing frameworks to address environmental and societal challenges.

CO3: Analyze the challenges and strategies associated with climate change mitigation, sustainable cities, and waste management within the context of international agreements and frameworks.

CO4: Evaluate and design innovative approaches to energy, water, and waste management, considering the principles of the circular economy and global SDG progress reports.

Module Number	Topic	Sub-topics	Mapping with Industry and International Academia	Lecture Hours	Corresponding Lab Assignment
I	Overview - United Nations Sustainable Development Goals (UNSDGs)	Basic ideas of environment, basic concepts: man, society & environment, their interrelationship. Significance of sustainability in today's world. 17 United Nations Sustainable Development Goals (UNSDGs) - background, significance, interconnectedness of goals, global challenges and recent progress. Climate change and mitigation. Explain and evaluate the evidence for human-caused climate change, in the context of historical climate change, as well as the relevant scientific uncertainties and possible evidence to the contrary.	<p>International Academia: https://unccelearn.org/course/view.php?id=170&page=overview https://unccelearn.org/course/view.php?id=181&page=overview</p> <p>Industry Mapping:</p>	4	Assess the college campus alignment with the United Nations Sustainable Development Goals (SDGs) and rank the performance across selected goals mentioning the actionable strategies for improvement.
II	Sustainable Management	Sustainable management of water and sanitation- introduction, key components, challenges and innovative approaches. Ensure access to affordable, reliable, sustainable, and modern energy- introduction, importance, key targets, challenges and strategies. Sustainable Cities and Communities- Definition of sustainable cities, current challenges, strategies, innovative solution, smart city	<p>International Academia: https://ocw.mit.edu/courses/res-env-006-teaching-with-sustainability-january-iap-2022/</p> <p>Industry Mapping:</p>	4	Design and propose innovative, sustainable solutions for managing water, energy, and urban systems, inspired by the principles of SDG 6, SDG 7 and SDG 11.
III	Climate Action	Climate change and its consequences, international agreements on climate change, strategies and actionable step, Life Below Water- Importance of water bodies and marine ecosystem, strategies for protecting aquatic life and water bodies, Life on Land- importance of biodiversity, carbon sequestration, Food security, Strategies for Conservation and Restoration of Ecosystems, Sustainable	<p>International Academia: https://unccelearn.org/course/view.php?id=7&page=overview&lang=en https://unccelearn.org/course/view.php?id=145&page=overview https://unccelearn.org/course/view.php?id=</p>	4	Using data analytics and modeling tools - evaluate climate change impacts, assess ecosystem health, and propose technical solutions for mitigation and conservation efforts.

		Land Management, Biodiversity Conservation, Accountable steps for life on land. The successes and failures of past national and international efforts to address climate change, and evaluate prospects for future management of climate change. Provisions of the United Nations Framework Convention on Climate Change, Paris Agreement	d=48&page=overview https://ocw.mit.edu/courses/res-env-001-climate-action-hands-on-harnessing-science-with-communities-to-cut-carbon-january-iap-2017/ Industry Mapping:		
IV	UN-call for Action	Focus on annual SDG Goals Report and the United Nations Secretary-General's calls for action to accelerate the progress on the Sustainable Development Goals (SDGs). Examine the global progress trends, challenges highlighted in recent reports, and key priorities proposed by the Secretary-General to achieve the 2030 Agenda.	International Academia: https://unccelearn.org/course/view.php?id=175&page=overview Industry Mapping:	4	Using quantitative analysis, strategic planning, and innovative approaches, evaluate the global progress on the Sustainable Development Goals (SDGs) as highlighted in the annual SDG Goals Report.
V	Environmental Systems Analysis	Environmental impact assessment - lifecycle assessment (LCA), Using of LCA software tools – OpenLCA, Environmental, social, and governance (ESG), Integrated Impact Assessment of ESG, Carbon Management, Green Hydrogen, Importance of green building (LEED, IGBC etc.) certification. Environmental Management System (EMS) in industry - ISO 14001.	International Academia: https://www.lse.ac.uk/united-states/Assets/Documents/Syllabus-Hub-PDFs/Michael-Carbajales-Dale-Clemson-Environmental-Systems-Analysis.PDF https://www.igmpi.ac.in/environmental-social-governance?gad_source=1 https://www.iso.org/standard/60857.html#:~:text=ISO%2014001%20is%20the%20internationally,continually%20improve%20their%20environmental%20performance. Industry Mapping:	4	Life Cycle Assessment of a college building using OpenLCA software.
VI	Waste Management	Waste Management Rules - Hazardous Waste, E-waste, Municipal Solid Waste, Bio-medical waste, Plastic Waste & Construction and Demolition Waste.	International Academia: https://cpcb.nic.in/rules-6/ https://ocw.mit.edu/courses/ec-716-d-lab-waste-fall-2015/	5	Mapping the supply chain of different waste management system and finding the issues &

		Management of different waste streams – collection, transportation, treatment, storage and disposal. Basel Convention, Extended producer responsibility (EPR) Energy & Resource Recovery - Incineration, Co-processing, Composting, Bio-methanation, Management of solar photo-voltaic modules or panels or cells, Battery Waste Management Rules, Circular Economy	https://unccelearn.org/course/view.php?id=131&page=overview https://unccelearn.org/course/view.php?id=87&page=overview Industry Mapping:		challenges.
--	--	---	--	--	-------------

Field works will be assigned for each and every student/ group of students, on completion of which they have to give a presentation alongwith a model display if possible.

Learning Resources:

Text Books:

This syllabus has been designed on the United Nations Sustainability Development Goals, so there is no prescribed text books. Please refer to the study material and online courses.

Subject Name: Project II (Research Methodology)

Subject Code: PRJME481

Credit: 1

Lecture Hours: 24

Pre-Requisites: Project – I (CAD Based)

Course Objective(s):

The purpose of learning of this course is to:

1. To be familiar with literature survey, problem identification & formulation.
2. To carry out experiments independently to achieve planned objectives.
3. To compile and analyze the data.
4. To develop or simulate an experimental model.
5. To present the project work in the form of dissertation.

Course Content.

Sl. No.	Contents	Hours
1	Understanding the language of research – concept, construct, definition, variable research process, literature review	2
2	Problem identification & formulation of research, development of hypothesis, testing of hypothesis – logic & importance	2
3	Research design concept and importance in research, concept of qualitative and quantitative research.	2
4	Data analysis and data preparation, interpretation of data and paper writing – layout of a research paper, ethical issues related to publishing, plagiarism and self-plagiarism, Use of tools / techniques for Research, Reference Management Software	4
5.	Dissertation submission based on analysis/simulation/experimental trial	1
6.	Presentation of the Project work	1

Course Outcome:

CO1: Understand and comprehend the basics of research methodology and apply them in research/ project work.

CO2: Apply knowledge and design experiments to obtain statistically significant data.

CO3: Systematically analyze to provide meaningful interpretation and present simulated/experimental data.

CO4: Understand the importance of teamwork to obtain any project goal.

Learning Resources:

- 1.Kothari, C.R, and Garg, G., (2019), Research Methodology - Methods and Techniques, 4th Edition, New Age International Publishers.

2.Catherine Dawson, (2019), Introduction to Research Methods by, 5th Edition, Robinson

3.Bordens, K. S. and Abbott, B. B. (2013) Research Design and Methods – A Process Approach. 9th Edition, McGraw-Hill.

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	3	2	2	1	3	1	3	2
CO2	3	2	2	3	3	2	2	1	3	1	3	2
CO3	3	2	2	3	3	2	2	1	3	1	3	2
CO4	3	2	2	3	3	2	2	1	3	1	3	2

Minor Degree in Robotics

Course Title	Mechanics of Robots
Course Code	MINOR401R
Number of Credits	3 (L: 3; T: 0; P: 0)

Course Objective: This course aims to inculcate thorough understanding about basic knowledge of mathematics, kinematics and dynamics required for understanding motion programming and operational / control functionality in robotics.

Course Contents:

Module No	Topic	Sub- topics
Module 1:	Mathematical Preliminaries of Robotics:	Spatial Descriptions: positions, orientations, and frame, mappings: changing description from frame to frame, Operators: translations, rotations and transformations, transformation arithmetic, compound Transformations, inverting a transform, transform equations, Euler Angles, Fixed Angles, Euler Parameters.
Module 2:	Robot Kinematics:	Manipulator Kinematics, Link Description, Link to reference frame connections, Denavit-Hartenberg Approach, D-H Parameters, Position Representations, Homogeneous Transformation Matrix, Forward Kinematics. Inverse Kinematics, Geometric and analytical approach.
Module 3:	Velocities & Statics:	Cross Product Operator for kinematics, Jacobians - Direct Differentiation, Basic Jacobian, , Jacobian J_v / J_w , Jacobian in a Frame, Jacobian in Frame $\{0\}$, Kinematic Singularity, Kinematics redundancy, Force balance equation, Forces, Velocity/Force Duality, Virtual

		Work, Force ellipsoid, Jacobian, Kinematic Singularity, Kinematics redundancy, Mechanical Design of robot linkages,
Module 4:	Robot Dynamics:	Introduction to Dynamics, Velocity Kinematics, Acceleration of rigid body, mass distribution Newton's equation, Euler's equation, Iterative Newton –Euler's dynamic formulation, closed dynamic, Lagrangian formulation of manipulator dynamics, dynamic simulation, computational consideration.

Text Books/References:

1. S. K. Saha, Introduction to Robotics 2e, TATA McGraw Hills Education (2014).
2. Dilip Kumar Pratihar, Fundamentals of Robotics, Narosa Publishing House, (2019)
3. Asitava Ghoshal, Robotics: Fundamental concepts and analysis, Oxford University Press (2006)
4. M. Spong, M. Vidyasagar, S. Hutchinson, Robot Modeling and Control, Wiley & Sons, (2005).
5. J. J. Craig, "Introduction to Robotics: Mechanics and Control", 3rd edition, AddisonWesley (2003).

Alternative SWAYAM/NPTEL Course:

NPTEL Course Name	Instructor	Host Institute
Robotics	Prof. Dilip Kumar Pratihar	IIT Kharagpur
Robotics	Prof. P. Seshu, Prof. P.S. Gandhi, Prof. K. Kurien Issac, Prof. B. Seth, Prof. C. Amarnath	IIT Bombay

Course Outcomes: After completion of course, students would be able:

1. To understand terminologies related to Kinematics and Dynamics of Robotics.
2. To apply mathematics for manipulator positioning and motion planning.

3. To analyse basics of motion programming as per kinematics.
4. To estimate the force/torque required to drive a robot.

Minor Degree in Sustainable Energy Engineering (SEE) - ME Program

Climate Change: Understanding & Observation

Course Code: MINOR401S
Course Title: Climate Change Understanding & Observations
Number of credits: 3[Lecture (14hours), Practical (10hours), Social(15hours)]
Course category: Minor
Prerequisite: None

Course Description:

Climate Change poses an increasing threat to the stability of Earth's systems. If we want to protect our planet from dangerous and unprecedented change, first we must understand the science behind climate change. This course will help in looking back across understanding the dynamics of climate change, its causes, and consequences, and learning the difference between 'natural' from 'human' induced climate change; looking to the present to see how the impacts of climate change are already being felt; finally looking to the future to see what it might hold for our planet.

Course Objective:

This course will offer

- Understanding of climate change, the difference between climate and weather
- Understanding the causes, consequences of climate change
- Evidence of the climate change - frequency and intensity of the erratic climatic events
- Comprehending the future of fossil fuels in a carbon-constrained world
- Understanding the past climate agreements
- Understanding the pledges of COP26
- Future scenarios of climate action
- Up-scaling renewable energy

Course Content

A. Theoretical Learning

Each lecture is assumed to be for one hour. In the content column, if possible breakdown the content of 1 hour in sub-topics

1	Understanding the climate and weather: <u>discussion</u> on what is climate, weather, the difference between the two, and defining climate change, understanding the relevance of 1.5 degrees and 2-degree Celsius warming.
2	Science of climate change: In-depth understanding of the causes climate change, human contribution to climate change, anthropogenic drivers of climate change,
3	Understanding the depletion of natural elements: What would be the impacts of these changes in climate for human well-being and the natural world? Understanding the consequences of climate change on the depletion of the two natural resources - water and soil changes , amount of changes, reasons behind, what are future trends
4	Understanding the depletion of natural elements: change: An understanding and analysis of the consequences of the climate change of two parameters - temperature and precipitation change , amount of changes, reasons behind, what are future trends
5	Understanding the depletion of natural elements: An understanding and analysis of the consequences of the climate change of two parameters - droughts & heatwaves and hurricanes, amount of changes, reasons behind, what are future trends
6	Understanding the depletion of natural elements: An understanding and analysis of the consequences of the climate change of two parameters - sea levels and glacier melting , amount of changes, reasons behind, what are future trends
7	The future of fossil fuels in a carbon-constrained world: Understanding the fossil fuels and how they will be earmarked in the future of the energy generation and consumption, how we can move towards the decarbonized world
8	Climate Change Agreements: Understanding the evolution of the climate agreements, UNFCCC, Kyoto protocol, the defining agreements of Paris and COP
9	The pledges of COP26: What is COP26?, participating organizations, Understanding the synopsis of the current climate agreement of COP26 and how the countries have committed to marking their progress with the initial commitment

10	Future scenarios of climate action: In-depth study of two scenarios - one with the world wherein the consumption of fossil fuels remain the same, then what will happen to our ecosystems and the second scenario, where in we move towards a decarbonized world, what will be the impact on our ecosystems
11	Mitigation and Adaptation Strategies (Part-1): Understanding the what are roles of individuals, countries, and the global community in adapting to climate change and policies for up scaling renewable energy
12	Mitigation and Adaptation Strategies (Part-2): Understanding the what are roles of individuals, countries, and the global community in adapting to climate change and policies for up scaling renewable energy
13	Case Study-1:Climatechange mitigation and adaptation
14	Case Study-2:Climate change mitigation and adaptation

B. Practical Learning

Each experiment can be for 4 to 6 hours. In contents please provide as detailed a title of the experiments as possible, also break down experiments in sub experiments to give a clear indication on what are the concepts/observations students are expected to learn in each experiment.

Exp. No	Contents
Note	Conduct any of the five experiments listed below
1	Find out the records (measurements from meteorology stations) of average temperature changes of the past 20-30 years in your region. Observe the patterns of temperature change and make critical comments on patterns and reasons behind.
2	Find out the records (measurements from meteorology stations) of average precipitation of the past 20-30 years in your region. Observe the patterns of temperature change and make critical comments on patterns and reasons behind.
3	Prepare a report on the possible role of your institutions in the mitigation of climate change. Do this based on discussion with people in society. Frame a set off 5to6 questions, interview people and based on the interview prepare a report.
4	Estimate the carbon footprint of your institute based on energy consumption of the institute. Also make an estimate of carbon emission of your institute (even if it is very approximate) that includes travelling by students and staff, carbon footprint due to residents, etc.

C. Social Learning

This activity would be most crucial and needs careful design. This includes activities outside the classroom and outside the laboratory. Students must do something to apply their knowledge. This can also be exercised to apply the knowledge learned in the classroom and laboratory and gather more information/data from society on a topic.

Social experiment	
No.	Contents
Note	Conduct any of the three experiments/exercises
1	Prepare a report on the possible role of individuals in the mitigation of climate change. Prepare this report based on discussion with people in society. Frame a set of 5 to 6 questions, interview people and based on the interview prepare a report.
2	Visit a nearby river / pond /forest, discuss with people living around it and figure out the changes people have observed since the last 20-30 years. Prepare a report.
3	Prepare a report on what is your and your family's possible role in contribution to climate change and its mitigation. As far as possible quantify the contributions.
4	Prepare a report on newspaper coverage of climate change and related happenings of your region and country since last one year. Make your remarks on newspaper coverage.

The expected outcome of course:

The possible outcomes of course are:

- Ability to describe the key principles of climate change
- Ability to identify the causes and consequences of climate change
- Ability to identify signs of climate change

- Understand the impacts on the current ecosystems
- Understanding the future projections and what the future may hold for Earth

Course Title	Introduction to Data Analytics
Course Code	MINOR401A
Number of Credits	4 (L: 3; T: 0; P: 2)
Course Category	AIML
Pre- Requisite	Basic Statistics

Course Objective:

- Provide you with the knowledge and expertise to become a proficient data scientist
- Demonstrate an understanding of statistics and machine learning concepts that are vital for data science;
- Produce Python code to statistically analyse a dataset;
- Critically evaluate data visualisations based on their design and use for communicating stories from data;

Course Contents:

Module 1:

[Duration: 7 Lectures]

Introduction to Data Science, Different Sectors using Data science, Purpose and Components of Python in Data Science.

Module 2:

[Duration: 7 Lectures]

Data Analytics Process, Knowledge Check, Exploratory Data Analysis (EDA), EDA Quantitative technique, EDA- Graphical Technique, Data Analytics Conclusion and Predictions.

Module 3:

[Duration: 11 Lectures]

Feature Generation and Feature Selection (Extracting Meaning from Data)- Motivating application: user (customer) retention- Feature Generation (brainstorming, role of domain expertise, and place for imagination)- Feature Selection algorithms.

Module 4:

[Duration: 10 Lectures]

Data Visualization- Basic principles, ideas and tools for data visualization, Examples of inspiring (industry) projects- Exercise: create your own visualization of a complex dataset.

Module 5:

[Duration: 7 Lectures]

Applications of Data Science, Data Science and Ethical Issues- Discussions on privacy, security, ethics- A look back at Data Science- Next generation data scientists.

Lab Work:

1. Python Environment setup and Essentials.
2. Mathematical computing with Python (NumPy).
3. Scientific Computing with Python (SciPy).
4. Data Manipulation with Pandas.
5. Prediction using Scikit-Learn
6. Data Visualization in python using matplotlib

Text Books/References:

Corresponding Online Resources:

1. Data Analytics, https://onlinecourses.swayam2.ac.in/ntr24_ed70/preview

Course Outcomes: After completion of course, students would be able to:

1. Explain how data is collected, managed and stored for data science;
2. Understand the key concepts in data science, including their real-world applications and the toolkit used by data scientists;
3. Implement data collection and management scripts using MongoDB.
